- And multi layer is not possible to manufacturing at home.
- Conductors on different layers are connected with plated-through holes called vias.
- And also it is very easy to make a PCB at home at very low of cost.

Introduction

- A **Printed Circuit Board (PCB)** electrically connects electronic components using tracks, pads
- PCBs can be single sided, double sided or multi-layer.
- Total thickness of PCB is 1.6mm

Methods of Manufacturing PCB at Home

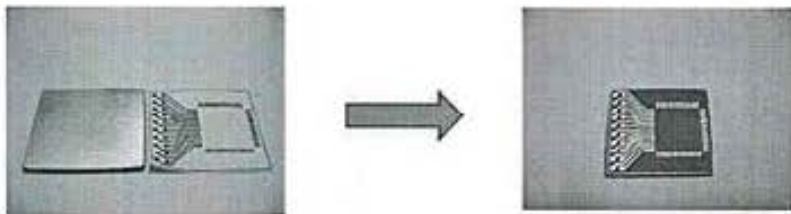

There are so many methods are they some of the methods where mentioned below.

1. Toner Transfer method
2. Photo-resist method
3. Screen printing method and etc.,

Toner Transfer Method

- Toner Transfer method is used to manufacture Small quantity of board. i.e. one or two
- It is very simple method
- Ferric chloride is used as Etching solution
- Glossy paper is used to transfer the Trace to the board.

Toner Transfer Process

- At first heat the copper clad and then place the glossy paper which contains trace and place it on the surface of the clad.
- And heat once again with laminator and remove the paper now trace will stick to the clad.
- Using Ferric chloride as Etching solution will etch the copper and then clean with acetone.

Merits and Demerits of Toner Transfer Method

Merits:-

- It is very cheap to do
- Time consumption to make a PCB is very less

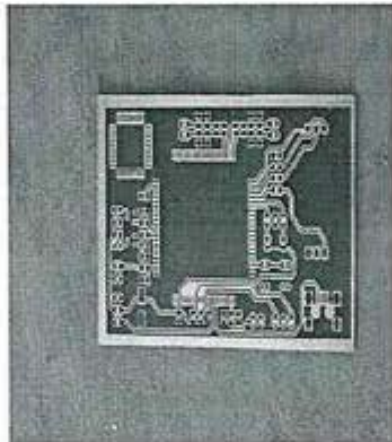

Demerits:-

- Accuracy of the trace is very less.
- Solder-Mask can't be done by this method.

Photo-Resist Method

- Photo-Resist method is used to manufacture Maximum amount of board. i.e. one to Many boards.
- It is also very simple and easy method.
- Time consumption is low when compared to the Toner Transfer method.
- Instead of glossy paper, the OHP sheet and Photo-Resist film is used.
- Using this method double side trace can be done.
- And UV lights are used to expose the photo-resist film.

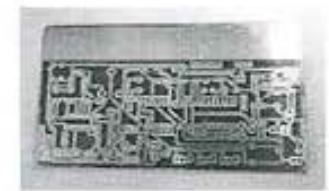

Photo-Resist Process

- Clean and dry the clad, Photo-resist film is placed in the surface of the clad
- Now the clad is expose to the UV light with Trace where OHP is printed.
- At last the clad is ready to etch

Merits and Demerits of Photo-Resist Method

Merits:-

- It is very cheap to do and large amount of order can be done by this method.
- Accuracy of the trace is very high like professional.

Demerits:-

- For larger amount the cost of the PCB is More Photo – resist film is need to buy.
- Time consumption to make a PCB is more when compared to the Toner Transfer method.

Screen Printing Method

- Screen Printing method is used to manufacture Maximum amount of board only. i.e. More than 10 boards. If reduce the board then increase the manufacture cost.
- It is hard to make when compare to the other methods.
- Time consumption is low while manufacture large amount of clad.
- Instead of glossy paper, OHP sheet and Photo-Resist film the photo screen printing solution is used.

Screen Printing Process

- Using photo screen printing solution trace, silk screen and solder mask template is prepared.
- Ink is used for trace, silk screen and solder mask.
- By sliding the ink from Upside to downside in the template then the ink is spread evenly on the copper clad.
- Now it is ready to expose in the UV light.

Demerits:-

- Making template is little complex.
- More UV ink is required to do.

Overall Advantages

- Time consumption to make a PCB is very less
- PCB can be manufacture using House hold products.
- Both double layer and single layer can be done
- Solder Mask is also can be done.

Overall Disadvantages

- Chemicals which is used are very toxic
- Disposal of chemical is very complicated.
- Proper protection should be takes place.
- Multi layer PCBs can't be manufacture at the home

WHAT IS AUTOMATION ?

The term 'AUTOMATION' is derived from the Greek word *automata* which mean-self dictated .

Automation is basically the delegation of human control functions to technical equipment aimed towards achieving

- Higher productivity.
- Superior quality of end product.
- Efficient usage of energy and raw materials.
- Improved safety in working condition

© IPCSB

Why automation?

- To reduce human efforts
- To get maximum efficiency from machine and control them with minimum human effort.
- To reduce complex circuitry of entire system
- To eliminate the high costs associated with inflexible, relay-controlled systems.

© IPCSB

AUTOMATION is now everywhere

© IPCSB

INDUSTRIAL AUTOMATION

It is Automation applied to Industry.
It is the use of advanced systems/techniques to control industrial machinery and processes, reducing the need for human intervention.

Objectives of Industrial Automation

- Improve quality
- Increase rate of production
- Increase efficiency
- Increase safety
- Reduce downtime

History of automation

- Manual control
- Hardwired control
- Electronic control
- Programmable Logic Control

© IPCR

Manual Control

Controlling of a process which is fully depended on humans.

© IPCR

Disadvantages:

- More man power
- Less accuracy
- Less productivity
- More time
- Less efficiency

© IPCR

Hardwired Control

Controlling a process or sequence using different types of switching devices like relays, contactors, timers, counters and control and power circuits is called hardwired control.

© IPCR

Disadvantages

- Bulky wiring
- Difficult to troubleshoot
- Difficult to modify
- Complex
- Maintenance
- Cost

Electronic Control

The drastic development in electronics industry made micro processor and micro controllers that could replace the existing systems in the industry. These systems reduce the space and complexity of control systems in the industry.

Disadvantages:

- Programming difficulty as programming structure incompatible for the industry.
- Not able to with stand high temperatures present in the industry.
- Absence of a common Platforms for communication between devices.
- Get damaged due to electric and magnetic interferences present in the industry.

Relays

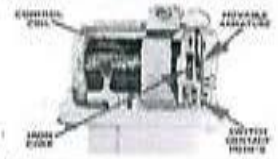

Used for designing different control circuits

Relay panels are replaced by modern controller like PLCs

Consists of a coil, Common contact, Normally open contact (NO) Normally close contact (NC)

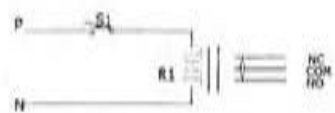

Classification

1. Based on coil voltage
2. No. of poles
3. Current rating of contacts

Programmable Logic Controllers

- A digitally operating electronic system, designed for use in an industrial environment
- Uses a programmable memory for the internal storage of user-oriented instructions for implementing specific functions such as logic, sequencing, timing, counting and arithmetic, as control, through digital or analog inputs and outputs, various types of machines or processes

PLC History

- PLC: introduced in the late 1960 to replace Relays and Hard-wired Programming.
- In 1970s with the coming of microprocessors and associated peripheral chips, the whole process of control and automation underwent a radical change.
- The programmable controllers have in recent years experienced an unprecedented growth as universal element in Industrial Automation.

Main Parts of a PLC

Many PLC configurations are available, even from a single vendor. But, in each of these there are common components and concepts. The most essential components are:

Power Supply - This can be built into the PLC or be an external unit. Common voltage levels required by the PLC (with and without the power supply) are 24Vdc, 120Vac, 220Vac.

CPU (Central Processing Unit) - This is a computer where ladder logic is stored and processed.

I/O (Input/Output) - A number of input/output terminals must be provided so that the PLC can monitor the process and initiate actions.

Indicator lights - These indicate the status of the PLC including power on, program running, and a fault. These are essential when diagnosing problems.

© IPCR

PLC inputs & outputs

- Inputs to, and outputs from, a PLC are necessary to monitor and control a process.
- Both inputs and outputs can be categorized into two basic types: **logical** or **continuous**.
- Consider the example of a light bulb. If it can only be turned on or off, **it is logical control**.
- If the light can be dimmed to different levels, **it is continuous**.

© IPCR

More about PLC outputs

- Outputs from PLCs are often relays, but they can also be solid state electronics such as transistors for DC outputs or Triacs for AC outputs.
- Continuous outputs require special output cards with digital to analog converters.

© IPCR

Programming Device

The programming device or terminal, is used to enter the desired program into the memory of the PLC's processor. This program is entered using **Relay Ladder Logic**, which is the most popular programming language used by all manufacturers of PLC.

Programming devices: a) Handheld unit, & b) Personal computer with appropriate software.

Power flows through these contacts when they conduct. The normally open contact (NO) will conduct when the control bit on the contact is true (1). The normally closed contact (NC) will conduct when the control bit on the contact is false (0).

Coils represent relays that are energized when power flows to them. When a coil is energized it causes the corresponding bit to turn on by changing the state of the status to 1.

© IPCB

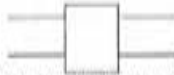

Rung Or Network

Each rung or network on a ladder program represents a logic operation

In the above rung, output C is true (1) when input A is high (1).

Boxes

Boxes could represent various instructions or functions that are executed when power flows to the box. Examples are compare instructions, timers, counters and math operations.

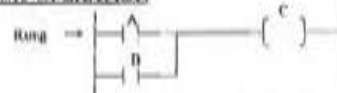

© IPCB

AND OPERATION

In the above rung, both inputs A and B must be true (1) in order for the output C to be true (1).

OR OPERATION

In the above rung, either of the inputs A or B are to be true (1), for the output C to be true (1).

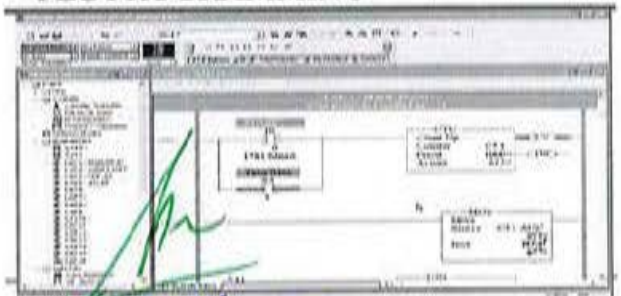

© IPCB

NOT OPERATION

In the above rung, it can be seen that if input A is true (1), then for output C to be true (0) or when A is (0), output C is 1.

ADVANTAGES OF MANUAL TESTING

Unmatched opportunities in usability testing (because only humans can access user-friendliness from a human point of view)

The chance to start testing right away without time for writing automated tests

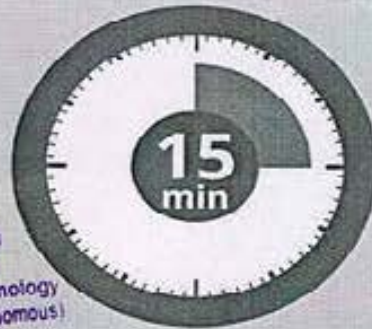

Best fit for Ad-hoc testing (also referred to as random testing or monkey testing) that has no plan and can result in unexpected insights

Best fit for exploratory testing, often described as simultaneous test design and test execution, which lets QAs show maximum creativity

Lower testing costs per hour of QA engineer work

Best price/quality ratio for one-time or simple testing tasks

Uses of Python

- shell tools
 - system admin tools, command line programs
- extension-language work
- rapid prototyping and development
- language-based modules
 - instead of special-purpose parsers
- graphical user interfaces
- database access
- distributed programming
- Internet scripting

5-Aug-22

Advanced Programming
Spring 2002

What not to use Python (and kin) for

- most scripting languages share these
- not as efficient as C
 - but sometimes better built-in algorithms (e.g., hashing and sorting)
- delayed error notification
- lack of profiling tools

Advanced Programming
Spring 2002

Python structure

- modules: Python source files or C extensions
 - import, top-level via from, reload
- statements
 - control flow
 - create objects
 - indentation matters – instead of { }
- objects
 - everything is an object
 - automatically reclaimed when no longer needed

First example

```
#!/usr/local/bin/python
# import systems module
import sys
marker = ':::::'
for name in sys.argv[1:]:
    input = open(name, 'r')
    print marker + name
    print input.read()
```

Basic operations

- Assignment:
 - `size = 40`
 - `a = b = c = 3`
- Numbers
 - integer, float
 - complex numbers: `1j+3`, `abs(z)`
- Strings
 - `'hello world'`, `'it\'s hot'`
 - `"bye world"`
 - continuation via `\` or use `""" long text """`

5-Aug-22

Advanced Programming
Spring 2002

String operations

- concatenate with + or neighbors
 - word = 'Hello' + x
 - word = 'Hello' 'a'
- subscripting of strings
 - 'Hello' [2] → 'l'
 - slice: 'Hello' [1:2] → 'el'
 - word[-1] → last character
 - len(word) → 5
 - immutable: cannot assign to subscript

5-Aug-22

PRINCIPAL
K.S.R. COLLEGE OF ENGINEERING
K.S.R. KALVI NAGAR,
TIRUCHENGODE-637 215

Advanced Programming
Spring 2002

Lists

- lists can be heterogeneous
 - `a = ['spam', 'eggs', 100, 1234, 2*2]`
- Lists can be indexed and sliced:
 - `a[0] → spam`
 - `a[:2] → ['spam', 'eggs']`
- Lists can be manipulated
 - `a[2] = a[2] + 23`
 - `a[0:2] = [1, 12]`
 - `a[0:0] = []`
 - `len(a) → 5`

Basic programming

```
a,b = 0, 1
# non-zero = true
while b < 10:
    # formatted output, without \n
    print b,
    # multiple assignment
    a,b = b, a+b
```

Advanced Programming
Spring 2002

Control flow: if

```
x = int(raw_input("Please enter #:"))
if x < 0:
    x = 0
    print 'Negative changed to zero'
elif x == 0:
    print 'Zero'
elif x == 1:
    print 'Single'
else:
    print 'More'
▪ no case statement
```

5-Aug-22

Advanced Programming
Spring 2002

Control flow: for

```
a = ['cat', 'window', 'defenestrate']  
for x in a:  
    print x, len(x)
```

- no arithmetic progression, but
 - `range(10) → [0, 1, 2, 3, 4, 5, 6, 7, 8, 9]`
 - `for i in range(len(a)):`
 `print i, a[i]`
- do not modify the sequence being iterated over
