24th August 2020 to 29th August 2020

Report of the Program

Intent of STTP:

Skill development is mandatory among the students, research scholars and faculty members. Keeping this in mind, “Forum on Nurturing Clean-Water and Green-Waste” STTP is organized.

Theme of STTP

As the global population continues to grow and climate change results in more water crises, the demand for clean and easily accessible water becomes greater and threatens human existence as a whole. This increase in demand has prompted the development of several ingenious methods of producing clean water, and one of the most interesting methods which we have seen is the recycling of waste to produce drinking water. Besides, management of green and organic wastes is important to maintain our environment as a worthwhile. Many of the research works are going-on in ensuring clean water and management of green waste. Thus, keeping this as main aim, this STTP as “Forum on Nurturing Clean-Water and Green-Waste” was organized on 24th August 2020 to 29th August 2020.

Topics Covered:

The Programme is designed in such way that the participants start with learning about different types of green wastes in different disciplines and their disposal techniques in effective way by utilizing the waste to valuable energy. The following research topics were discussed in the STTP. They are:

- Clean and Safe Environment for Healthy Living
- Advanced Oxidation Process for the Treatment of Wastewater
- Recent Research and Development in the Field of Ocean Engineering
- Research Methodologies on Synthesis of Artificial Aggregate
- Hyper-trophication of Water bodies
- Green Sludge Management Practice in Lead-Acid battery Manufacturing Industries
- study of water shed management in Himalayan region
- skills related to Promising replacements for mixing water in concrete
- Faecal Sludge management- A Critical Review
- Recent Trends in Wastewater Treatment Plants
- Sustainable use of Wastewater in Construction Industry

Overall, updated and useful research methodologies were discussed in connection with treatment of water, wastewater and handling of organic and inorganic waste.

REC Murali Karuppuswamy is presenting

CLEAN WATER SOLUTIONS FOR DEVELOPING COUNTRIES
Rainwater Harvesting

- Accumulating rainwater from surfaces on which it falls and subsequently storing it is a practice that has been carried out by humans for centuries.
- It is a useful way of reducing reliance on municipal water supply systems and providing water in remote rural areas that may not be connected to conventional water supply.
