About Library

The Library of the Computer Science and Engineering (CSE) department serves as a crucial resource center aimed at fulfilling the academic and research requirements of students, faculty, and researchers within the domain of computer science. It offers a comprehensive array of textbooks, journals, and research articles that encompass fundamental subjects such as algorithms, data structures, artificial intelligence, cybersecurity, and software engineering.

Additionally, the library houses a significant collection of previous projects and theses, which provide valuable insights and inspiration for current students. It features quiet study areas, collaborative spaces, and access to innovation hubs that facilitate hands-on learning, thereby promoting both individual study and teamwork. overall, the CSE library is an indispensable environment for nurturing knowledge, stimulating innovation, and supporting academic advancement in the swiftly changing landscape of computer science and engineering.
