

**Civil Engineering
Department Library**

The **Civil Engineering Department Library**, a dedicated space designed to support students, faculty, and researchers in their academic and professional growth. Our library is a resource hub for the study, research, and practice of civil engineering, housing an extensive collection of books, journals and technical reports.

Library Overview:

The Civil Engineering Department Library is fully equipped to meet the needs of students and faculty members engaged in various civil engineering disciplines, including:

- Structural Engineering
- Geotechnical Engineering
- Transportation Engineering
- Environmental Engineering
- Construction Management
- Water Resources Engineering
- Surveying & Geomatics

Key Features of the Library

- **Extensive Collection:**
The department library houses an extensive collection of 420 books, encompassing a diverse range of 200 unique titles. These resources cover a wide array of civil engineering topics, making it an invaluable asset for students and faculty alike.
- **Study Spaces:**
The library provides quiet study areas for individuals or small groups. The design focuses on providing an optimal environment for studying, reading, and collaborative work.
- **References and Research Assistance**
Our library staff is available to assist with finding specific books, journals, articles, and other reference materials.
