

## B.E. - ELECTRONICS AND COMMUNICATION ENGINEERING Curriculum & Syllabus for Semester I and II

# REGULATIONS 2024 (Academic Year 2024-25 Onwards)

## K.S.R. COLLEGE OF ENGINEERING: TIRUCHENGODE - 637 215 (Autonomous) <u>DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING</u> B.E. – Electronics and Communication Engineering (REGULATIONS 2024)

#### Vision of the Institution

IV	We envision to achieve status as an excellent educational institution in the global
	knowledge hub, making self-learners, experts, ethical and responsible engineers,
	technologists, scientists, managers, administrators and entrepreneurs who will
	significantly contribute to research and environment friendly sustainable growth of the
	nation and the world.

#### **Mission of the Institution**

IM 1	To inculcate in the students self-learning abilities that enable them to become competitive and considerate engineers, technologists, scientists, managers, administrators and entrepreneurs by diligently imparting the best of education, nurturing environmental and social needs.
IM 2	To foster and maintain a mutually beneficial partnership with global industries and institutions through knowledge sharing, collaborative research and innovation.

#### Vision of the Department / Programme: (Electronics and Communication Engineering)

DV	We envision as a center of excellence in the field of Electronics and Communication
	Engineering to produce technically competent graduates with diverse teaching and
	research environments.

#### Mission of the Department / Programme: (Electronics and Communication Engineering)

DM 1	To educate the students with the state of art technologies to meet the growing challenges of the industries.
DM 2	To develop an innovate, competent and ethical Electronics and Communication Engineer with strong foundations to enable them for continuing education.

#### Programme Educational Objectives (PEOs): (Electronics and Communication Engineering)

The grad	The graduates of the programme will be able to									
PEO 1	<b>Employability and Higher Education:</b> Excel in Professional career and higher education by acquiring knowledge in mathematical, social, scientific & engineering principles.									
PEO 2	<b>Core Competence:</b> Analyze, design and develop/implement core-engineering problems in communication systems that are technically sound, economically feasible and socially acceptable.									
PEO 3	<b>Interpersonal Skills and Team Work:</b> Exhibit professionalism, ethical communicating skills and team work by engaging in lifelong learning for sustainable development of the society.									

#### Programme Outcomes (POs) of B.E. - Electronics and Communication Engineering

Progr	am Outcomes (POs)
PO1	<b>Engineering Knowledge:</b> Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
PO2	<b>Problem Analysis:</b> Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
PO3	<b>Design/Development of Solutions:</b> Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
PO4	<b>Conduct Investigations of Complex Problems:</b> Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
PO5	<b>Engineering Tool Usage:</b> Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6).
PO6	<b>The Engineer and The World:</b> Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
PO7	<b>Ethics:</b> Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
PO8	<b>Individual and Collaborative Team work</b> : Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
PO9	<b>Communication:</b> Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.
PO10	<b>Project Management and Finance:</b> Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
PO11	<b>Life-Long Learning:</b> Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)
Progra	m Specific Outcomes (PSOs)
PSO1	Professional Skills: Apply the fundamental principles of electronics and communication to design, develop and analyze modern electronic devices and systems for various applications such as communication, signal processing, networking, embedded systems, VLSI and RF systems.
PSO2	Empowering Excellence: Utilize the core competency and interpersonal skills to develop electronic products that fulfill the needs of society and industrial expectations.

COURSE OUTCOMES: At the end of the course, the learners will be able to:									
COs	Course Outcome	Cognitive Level							
CO1	Compare and contrast products and ideas in technical texts.	Analyse							
CO2	Interpret and comprehend the given texts and writing reports/paragraphs	Understand							
CO3	Analyze problems in order to arrive at feasible solutions and describe the product/process effectively.	Analyse							
CO4	Report events based on the Graphical representation and provide recommendations.	Analyse							
CO5	Draft effective resume's for job/internships	Apply

#### **PREREQUISITE:**

Students should be familiar with fundamental concepts such as force, energy and magnetic fields, as well as have a basic understanding of electric circuits, including the behavior of resistors, capacitors and inductors in both DC and AC circuits. Proficiency in mathematics, particularly in algebra, trigonometry and introductory calculus, is essential for understanding the mathematical principles underlying electrical concepts and machine operation.

#### **OBJECTIVES:**

- To provide fundamental in electrical principles, laws and the use of key measurement instruments for accurate analysis of electrical circuits.
- To disseminate the concepts of measurement of error analysis, standards and the functioning of various electrical measuring instruments, with a focus on calibration and operational principles.
- To equip the students with ability to calculate EMF, transformation ratios, voltage regulation, and load conditions.
- To enable students to calculate EMF, torque and speed control techniques, by providing a thorough understanding of construction, operation and speed control of DC machines.
- To provide insights into the construction, operation, and applications of AC motors and special machines, preparing students to analyze and implement these machines in practical scenarios.

	BASIC ELECTRICAL CONCEPTS AND MEASURING	
UNIT - I	INSTRUMENTS	(9)

Basic components and electric networks; charge, current, voltage and power, voltage and current sources, Faradays law and Lenz law, Ohms law, Kirchhoff's laws - Functional elements of a measurement system – Electronic Voltmeter and their advantages – True RMS voltmeter – Ohmmeter – Electronic multimeter – Current , Voltage and Power measurement.

## UNIT - II FUNDAMENTALS OF MEASUREMENT AND INSTRUMENTATION

(9)

(9)

(9)

Measurement standards - Errors - Types of Errors - Need for calibration - Classification of instruments, secondary instruments – indicating, integrating and recording operating forces - essentials of indicating instruments; deflecting, damping, controlling torques - moving coil, moving iron instruments; Ammeters and voltmeters, constructional details and operation.

#### UNIT - III TRANSFORMERS

Constructional details – Principle of operation – EMF equation – Transformation ratio – Transformer on no load and load – Equivalent circuit – Load test – Voltage regulation – Auto transformer.

#### UNIT - IV D.C. MACHINES

Laws of Electromagnetism – Construction of DC machines – DC generator: EMF equation – Shunt and series generators– Characteristics – DC Motor: Principle of operation, Shunt and series motors -Torque equation – Characteristics – Starting and speed control of D.C series and shunt motors.

UNIT - V	A.C MOTORS & SPECIAL MACHINES	(9)

Three-phase induction motors: Construction, Principle of operation, Types – Starters- Applications – Single-phase induction motors: construction and operation - Split phase induction motor and capacitor start induction motor – Applications - Construction and operation of stepper motor.

#### Total: 45 PERIODS

COURSE C	COURSE OUTCOMES:										
At the end of the course, the students will be able to:											
COs	Course Outcome	Cognitive Level									
CO1	Explain the fundamental electrical concepts and instruments to accurately measure charge, current, voltage, and power in electrical circuits.	Understand									
CO2	Discuss the measurement standards, error and proficiently operate a range of electrical measuring instruments, ensuring accurate calibration and effective functionality.	Understand									
CO3	Apply transformer concepts including constructional details, principles of operation to estimate EMF equation, transformation ratios, performance under no-load and load conditions.	Apply									
CO4	Determine the speed, torque produced by DC machines and understand how it varies with different operating conditions.	Apply									
CO5	Describe the construction, operation and applications of AC motors and special machines.	Understand

	OUTCOMES: of the course, the learners will be able to:	
COs	Course Outcome	<b>Cognitive Level</b>
CO1	Identify and describe the fundamental components of computer systems and programming in C.	Understand
CO2	Infer the concepts of basic structures in control statements.	Understand
CO3	Imbibe the concepts of arrays and functions to effectively manage and process data in programming.	Understand
CO4	Utilize pointers to handle memory and work with strings to manage text in their programs.	Apply
CO5	Infer structures and unions to group different types of data and perform file operations to save and load data.	Apply

<b>49</b> 101/3117	WIA INICES AND CALCULUS	BSC	2	1	2	4
	(Common to All Branches)	-				
	SITE must have the knowledge on the basic concepts of Matrices ferentiation, integration, partial derivatives and vector algebra					
• To underst	<b>CS:</b> and the concepts of eigenvalues, eigenvectors and quadratic f	orms				
	rize students how to solve the higher-order linear differential					
	the skill on the geometric properties of curves using differer	•				
• •	tudents to analyze and optimize the functions of several varia	bles.				
• To apply v	ector calculus and its principles to evaluate vector fields.					
UNIT - I	LINEAR ALGEBRA				(9)	
Eigen vectors	equation – Eigen values and Eigen vectors of a real matrix (Excluding proof) – Cayley Hamilton theorem (excluding quadratic form to canonical form by orthogonal transformation	ng proof) – (				
UNIT - II	ORDINARY DIFFERENTIAL EQUATIONS				(9)	
	ntial equations of second and higher order with constant coe coefficients – Cauchy's and Legendre's linear equations – Me					
UNIT - III	DIFFERENTIAL CALCULUS				(9)	
Curvature - R	adius of curvature (Cartesian co-ordinates only) – Centre of o d Evolutes (Parabola, Ellipse, Hyperbola and Rectangular hy		Circle	e of c	. ,	tur
UNIT - IV	FUNCTIONS OF SEVERAL VARIABLES				(9)	
Partial derivat	ives – Euler's theorem for homogenous functions – Taylor's nctions of two variables – Method of Lagrangian multipliers.	s series expans	ion -	May	<u>``</u>	an
UNIT - V	VECTOR CALCULUS				(9)	
	ergence and Curl – Directional derivative – Irrotational and solane, Gauss divergence theorem and Stoke's theorem (only).					
List of Exerci	ise/Experiments(MAT LAB):					
1. Calcu	late the characteristic equation and eigen values					
	the eigenvector and diagonalization of a given matrix.					
	ng ODE with constant coefficients					
	t the solution of ODE with variable coefficients					
	fy the radius of curvature					
	lish the evolutes of curve.					
	on the Taylor's series for functions of two variables.					
8. Comp	bute the maxima and minima.					
9. Estim	ate the directional derivative, divergence and curl.					
	rmine line integral, surface integral and volume integral.					

11

COs	Course Outcome	Cognitive Level
CO1	Assimilate the eigen values and eigen vectors in reduction of quadratic form into canonical form.	Apply
CO2	Solve higher-order linear differential equations with constant and variable coefficients.	Understand
CO3	Analyse the center of curvature, circle of curvature and develop the evolutes.	Understand
CO4	Expand the Taylor series and calculate the extremum value for function of several variables.	Apply
CO5	Apply the divergence and curl in vector integral theorems of vector fields.	Apply

#### List of exercises/experiments:

- 1. By forming interference fringes, determine the width of one fringe and hence calculate the thickness of the given thin paper.
- 2. For a given optical fibre determine the acceptance angle and numerical aperture.
- 3. Evaluate the wave length of semiconductor laser.
- 4. Using semiconductor laser find the particle size of the lycopodium powder
- 5. Construct Carey Foster's bridge to measure the resistivity of an unknown wire.
- 6. Enumerate the thermal conductivity of a bad conductor by Lee's disc method.
- 7. Compute the band gap of an intrinsic semiconductor.
- 8. Draw the V-I characteristics of a solar cell and calculate its power.
- 9. By forming B-H curve calculate Hysteresis loss of magnetic materials.
- 10. Employing semiconductor laser compute the width of the groove of CD.

#### Lecture: 45 Laboratory:30 TOTAL: 75 PERIODS

#### **Course Outcomes:**

At the end of the course, the students will be able to:										
COs	Course Outcome	Cognitive level								
CO1	Categorize the types of laser and optical fibre to utilize it for specific application based on their desirable requisite.	Analyze								
CO2	Enumerate the preambles of quantum mechanics and implement its concepts to tackle the cumbersome engineering problems.	Apply								
CO3	Comprehend the basics of conducting materials based on classical and quantum theories.	Understand								
CO4	Apply the perceived preambles of semiconductor to fabricate it for the potential applications	Analyze								
CO5	Imbibe the concepts of magnetic and superconducting phenomenon that can be applied for possible technological and engineering applications.	Apply

	OUTCOMES: of the course, the students will be able to:	
COs	Course Outcome	Cognitive Level
CO1	Infer Python syntax to write code, using data types, operators, loops and conditionals.	Understand
CO2	Interpret string manipulation, data structures and exception handling to build robust applications.	Understand
CO3	Implement object-oriented programming principles, such as inheritance and polymorphism, to design effective solutions.	Apply
CO4	Make use of file I/O operations and database management techniques to manage and manipulate data efficiently.	Apply
CO5	Develop web applications and graphical user interfaces using Python frameworks and libraries	Apply

TOTAL: 30 PERIODS

COURSE	OUTCOMES:	
At the end	l of the course, the students will be able to:	
COs	Course Outcome	Cognitive Level
CO1	Demonstrate an understanding of Design Thinking concepts and principles by explaining their relevance in real-world contexts.	Understanding
CO2	Articulate the significance of a Design Mindset and its impact on creative problem-solving.	Understanding
CO3	Apply Design Thinking methods effectively at each stage of the problem-solving process.	Applying
CO4	Identify and implement the phases of Design Thinking to address complex challenges systematically.	Applying
CO5	Use a variety of Design Thinking tools to develop innovative solutions and refine ideas through iteration.	Applying

- 1. UnMukt The Science & Art of Design Thinking, Arun Jain
- 2. Don Norman ,The Design of Everyday Things, MIT Press, 2013

<b>24ECT22</b>	CIRCUIT THEORY	Category	L	Т	Р	C
2420122		PCC	3	1	0	4

### **PREREQUISITE:**

The students should have a strong foundation on basic electrical terminologies like voltage, current, power, Ohm's Law and Kirchhoff's Laws. Operation of circuit components like resistors, capacitors and inductors, along with their behavior in both DC and AC circuits, is essential. Mathematical skills, particularly in algebra, calculus, and complex numbers, are vital for analyzing network theorems and AC circuits are also needed to learn the course effectively.

### **OBJECTIVES:**

- To develop the ability to use Ohm's Law, KVL and KCL to estimate electrical parameters for simple and complex circuits.
- To gain proficiency in using network theorems to simplify complex DC circuits for calculation of voltage, current, and power.
- To acquire the skills to analyze the sinusoidal steady-state response of RL, RC, and RLC circuits.
- To develop the ability to analyze and predict the transient response of RL, RC, and RLC circuits when subjected to DC and sinusoidal inputs.
- To enable the students to characterize the two-port networks and its parameters to measure the inductance for magnetically coupled circuits.

UNIT - I	DC NETWORK ANALYSIS	(9+3=12)
----------	---------------------	----------

Analysis of series and parallel networks - Voltage and Current Division - Networks Reduction - Nodal and Mesh Analysis for Linear Resistive Networks - Network Topology – Duals - Dual Networks.

UNIT - II	NETWORK THEOREMS	(9+3=12)
-----------	------------------	----------

Superposition Theorem - Thevenin's Theorem - Norton's Theorem - Maximum Power Transfer Theorem - Reciprocity Theorem - Star - Delta Transformation.

Sinusoidal Steady State analysis - Characteristics of Sinusoids - AC Network Power Analysis; Instantaneous Power, Average Power, Apparent Power and Power Factor - Phase Relationship for R, L, and C - Analysis of Simple Series and Parallel AC Networks with Phasor Diagram.

# UNIT - IV TRANSIENTS AND RESONANCE IN RLC NETWORKS

(9+3=12)

Transient Response of RL, RC and RLC Networks for DC Input and Sinusoidal Inputs - Series and Parallel Resonance - Frequency Response - Quality Factor – Bandwidth - Half Power Frequencies.

(9+3=12)

Network parameters: Impedance, admittance transmission parameters and conversion formulae - Magnetically Coupled Networks: Self-Inductance, Mutual Inductance, Co-efficient of Coupling - Single and Double Tuned Networks - Analysis and Applications.

31

### Lecture: 45, Tutorial: 15, TOTAL: 60 PERIODS

<b>COURSE OUTCOMES:</b>
-------------------------

# At the end of the course, the students will be able to:

At the end of the course, the students will be able to:						
COs	Course Outcome	Cognitive Level				
CO1	Calculate current, voltage and power in both simple and complex electric circuits by applying foundational electrical laws.	Apply				
CO2	Apply network theorems to reduce complex circuits into simpler forms, facilitating easier calculation of electrical parameters.	Apply				
CO3	Analyze the steady-state behavior of RL, RC, and RLC circuits in AC systems using phasor diagrams.	Analyze				
CO4	Inspect the transient response of RL, RC, and RLC circuits to both DC and AC inputs.	Analyze				
CO5	Measure the electrical behavior of two-port networks and Coupled Circuits.	Apply

COURSE	COURSE OUTCOMES:							
At the end of the course, the students will be able to:COsCourse OutcomeCognitive Level								
COs	COs Course Outcome							
CO1	Illustrate the fundamental concepts of probability and standard distributions in real life phenomenon.	Understand						
CO2	Solve engineering problems by applying the concepts of two-dimensional random variables.	Understand						
CO3	Apply the concept of testing of hypothesis for small and large samples in mean and variance.	Apply						
CO4	Analyze the various statistical methods in Analysis of Variance.	Analyze						
CO5	Apply the quality control methods to design control charts.	Apply

# Applicable for the students admitted from 2024-2025

	OUTCOMES: of the course, the students will be able to:	
COs	Course Outcome	Cognitive Level
CO1	Assess the quality of water from quality water parameters	Understand
<b>CO2</b>	Recognize the concept of corrosion and its control.	Understand
CO3	Make use of batteries, fuel cell and solar cell for the production of electricity.	Apply
CO4	Apply the basics concepts of polymer chemistry in designing the materials for engineering and technology.	Apply
CO5	Identify the nano materials and composites for engineering and technology.	Apply

find specific information- Interpreting visual information-Comprehend detailed factual information—gather the gist- understand grammar and structure of the given passage- transferring information – Radio Commentary, Technical Texts and Case Studies – Guiding students for Intensive & Extensive Reading – Reading notices, messages, adverts, leaflets, contents pages, graphs, charts, tables, business letters, product descriptions, reports, minutes, newspaper or magazine articles, memos.

(6)

UNIT – V WRITING

Internal written communication - short messages to colleagues - note, message, memo, email- External communication - letter, email, notice-set phrases for letters and e-mails-Cohesive devices - All varieties of Technical Report, Business Letters and Job Application - Punctuation & Spelling, Semantics of Connectives, Modifiers and Modals, variety of sentences and paragraphs - Organizational Communication: Memo, Notice, Circular, Agenda / Minutes

# TOTAL = 30 PERIODS

### **COURSE OUTCOMES:**

### At the end of the course, the learners will be able to:

COs	Course Outcome	Cognitive Level
CO1	Understand and apply the basic grammar and learn the range of vocabulary	Understand
CO2	Listen enthusiastically and consolidate the messages and information of monologues and dialogues	Remember
CO3	Convey the views and opinions clearly in simple sentences	Apply
CO4	Read and comprehend the statistics and texts with clear understanding	Analyse
CO5	Write the contexts relevant to the topics efficiently.	Understand

24ECP21	CIRCUIT THEORY LABORATORY	Category	L	Т	Р	C C
24ECF21		РСС	0	0	2	1
DDDDDDDTTC						

### **PREREQUISITE:**

The students should have a strong understanding of fundamental electrical laws along with proficiency in circuit analysis techniques like mesh and nodal analysis. Students should be familiar with key network theorems, including superposition, Thevenin's, Norton's, maximum power transfer, and reciprocity. A grasp of transient response behavior in RL and RC circuits, as well as resonance phenomena in series and parallel circuits, is essential. Additionally, knowledge of AC circuit measurements and frequency response analysis is required to effectively perform and interpret the experiments.

### **OBJECTIVES:**

- To equip the students with foundational knowledge and practical skills necessary to apply the laws to solve electrical circuits.
- To make the students to apply Kirchhoff's Current Law (KCL) and Kirchhoff's Voltage Law (KVL) to solve complex circuits and validate their results with theoretical calculations.
- To prepare the students to calculate the voltage, current and power in DC circuits using network theorems, with an emphasis on verification through theoretical methods.
- To explore the transient response of RL and RC circuits under both DC and sinusoidal inputs, as well as construct and analyze series and parallel resonant circuits to determine their frequency response.
- To enable the students to analyze single-phase AC circuits accurately measure voltage, current, power, and power factor, thereby preparing them for practical applications in the field of electrical engineering.

### LIST OF EXPERIMENTS

- 1. Verification of following Laws and Theorems
  - Ohm's laws and Kirchhoff's laws
  - Mesh and nodal analysis
  - Superposition theorem
  - Thevenin's and Norton's theorems
  - ✤ Maximum power transfer theorem
  - ✤ Reciprocity theorem
- 2. Transient response of RL and RC circuits for DC and AC inputs
- 3. Frequency response of series and parallel resonance circuits
- 4. Measurement of self-inductance of a coil
- 5. Measurement of voltage, current power and power factor in single phase AC circuits
- 6. Study of frequency response of single tuned coupled circuits.

**TOTAL: 30 PERIODS** 

COURSE OUTCOMES:								
At the en	d of the course, the students will be able to:							
COs	Course Outcome	Cognitive						
		Level						
CO1	Apply KCL, KVL to solve electric circuits and verify with theoretical value.	Apply						
CO2	Calculate voltage, current and power for DC circuits using network theorems	Apply						
002	and verify with theoretical value.	тррту						
CO3	Analyze the transient behavior for RL, RC with DC and sinusoidal input.	Analyze						
CO4	Construct a series and parallel resonant circuit and find its frequency	Apply						
04	response.	Арргу						
CO5	Inspect single-phase AC circuits to measure voltage, current, power and							
05	power factor and its application.	Analyze
