Chairman (BoS)

3. Develop inheritance in Java by designing class hierarchies that demonstrate single inheritance, multilevel inheritance, and hierarchical inheritance with suitable parent and child classes.
4. Implement polymorphism in Java by demonstrating both compile-time polymorphism using method overloading and runtime polymorphism using method overriding with superclass references.
5. Write a small Java application using multiple classes to integrate inheritance, encapsulation, abstraction and polymorphism for managing system entities.

UNIT – III	INHERITANCE AND INTERFACES	(3+18)

Inheritance – Super classes and Subclasses – Protected Members – Constructors in Subclasses – The Object Class – Abstract Classes and Methods – Final Methods and Classes – Interfaces – Defining and Implementing Interfaces – Differences Between Classes and Interfaces – Extending Interfaces – Polymorphism with Inheritance – Strings.

List of Experiments:

1. Create a Java program to demonstrate inheritance by defining a superclass and one or more subclasses, illustrating the use of protected members and constructor chaining between the superclass and subclasses.
2. Construct a Java program that overrides methods of the Object class and uses abstract classes with abstract methods, where subclasses provide their own implementations.
3. Build a Java program to demonstrate the use of final methods and final classes and show how they restrict inheritance and method overriding.
4. Create Java programs using interfaces to enforce behavior through interface contracts, demonstrate multiple inheritance using interfaces, and show interface extension.
5. Write a Java program to demonstrate runtime polymorphism using inheritance, where a superclass reference invokes overridden subclass methods, including suitable operations using Java Strings.

UNIT– IV	EXCEPTION HANDLING AND I/O	(3+18)

Exceptions – Exception Hierarchy – Throwing and Catching Exceptions – Built-in Exceptions – Creating User-Defined Exceptions – Stack Trace Elements – I/O Basics – Streams – Byte Streams and Character Streams – Reading and Writing Console – Reading and Writing Files.

List of Experiments:

1. Implement a Java program to demonstrate basic exception handling using try, catch, and finally blocks, including handling of common built-in runtime exceptions.
2. Develop a Java program to illustrate the exception hierarchy by handling multiple related exceptions and explicitly using the throw and throws keywords.
3. Implement a Java program that defines and applies a user-defined exception and displays stack trace details to show how exceptions propagate through method calls.
4. Develop a Java program demonstrating basic input and output operations using standard input and output streams.
5. Implement a Java program that performs file handling by reading data from a text file and writing data to another file using appropriate byte and character streams.

UNIT – V	MULTITHREADING AND COLLECTIONS	(3+18)

Chairman (BoS)

Multithreading vs. Multitasking – Thread Life Cycle – Creating Threads – Synchronizing Threads – Interthread Communication – Daemon Threads – Inner Classes – ArrayList – Basics of Collections Framework – Generics – Generic Classes – Generic Methods.

List of Experiments:

1. Create a Java program to start multiple threads using the Thread class and Runnable interface, and demonstrate synchronization for shared resource access.
2. Develop a Java program to illustrate the thread life cycle, inter thread communication using wait(), notify() or notifyAll() and the behavior of daemon threads.
3. Build a Java program using inner classes to organize thread-related tasks within an outer class.
4. Write a Java program using the Collections Framework, specifically ArrayList, to store, retrieve, add, remove, and traverse dynamic data entered by the user.
5. Implement a Java program to demonstrate generic programming by designing a generic class and a generic method to perform operations on multiple data types.
