# DEPARTMENT OF MECHANICAL ENGINEERING

# M.E – INDUSTRIAL SAFETY ENGINEERING CURRICULUM & SYLLABI

# **Regulation 2020**

(Applicable to candidates admitted in the academic year 2020 - 2021 onwards)

# K.S.R. College of Engineering (Autonomous)

(Approved by AICTE, Accredited by NAAC with A++ grade & Affiliated to Anna University) K.S.R. Kalvi Nagar, Tiruchengode – 637 215

Namakkal (Dt), Tamilnadu, India

Email : info@ksrce.ac.in

Website : <u>www.ksrce.ac.in</u>

## K.S.R. COLLEGE OF ENGINEERING : TIRUCHENGODE - 637 215 (Autonomous) <u>DEPARTMENT OF INDUSTRIAL SAFETY\_ENGINEERING</u>

# (REGULATION 2020)

### Vision of the Institution

IV We envision to achieve status as an excellent educational institution in the global knowledge hub, making self-learners, experts, ethical and responsible engineers, technologists, scientists, managers, administrators and entrepreneurs who will significantly contribute to research and environment friendly sustainable growth of the nation and the world.

### Mission of the Institution

- **IM 1** To inculcate in the students self-learning abilities that enable them to become competitive and considerate engineers, technologists, scientists, managers, administrators and entrepreneurs by diligently imparting the best of education, nurturing environmental and social needs.
- **IM 2** To foster and maintain mutually beneficial partnership with global industries and Institutions through knowledge sharing, collaborative research and innovation.

### Vision of the Department / Programme: (Industrial Safety Engineering)

**DV** To be a centre of excellence in the field of Mechanical Engineering for providing its students and faculty with opportunities for excel in education and targeted research themes in emerging areas.

### Mission of the Department / Programme: (Industrial Safety Engineering)

**DM 1** To excel in academic and research activities that meet the industrial and social needs.

**DM 2** To develop competent, innovative and ethical mechanical Engineers.

### Programme Educational Objectives (PEOs) :(Industrial Safety Engineering)

### The graduates of the programme will be able to

- **PEO 1** Enhance the skills and knowledge on safety, health and environment with respect to industry and research, for executing safe methods in complex engineering problems.
- **PEO 2** Understand the impact of safety, health and environmental solutions on productivity, quality and societal at large.
- **PEO 3** To comply with legal safety, ethical and contractual requirements, professional practices to contribute the community for the sustainable development of society.

# K.S.R. COLLEGE OF ENGINEERING : TIRUCHENGODE - 637 215 (Autonomous) <u>DEPARTMENT OF INDUSTRIAL SAFETY\_ENGINEERING</u>

(REGULATION 2020)

# PROGRAMME OUTCOMES (POs) AND PROGRAMME SPECIFIC OUTCOMES (PSOs)

|      | Programme Outcomes (POs)   |  |  |  |  |  |  |  |
|------|--|--|--|--|--|--|--|--|
| P01  | An ability to independently carry out research / investigation and development work to solve practical problems.   |  |  |  |  |  |  |  |
| PO2  | An ability to write and present a substantial technical report / document.   |  |  |  |  |  |  |  |
| PO3  | Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be a level higher than the requirements in the appropriate bachelor program. |  |  |  |  |  |  |  |
| PO4  | An ability to attain identify and analy broughday of mathematics and assumption 0 and ability and mean any far   |  |  |  |  |  |  |  |
|      | Programme Specific Outcomes (PSOs)   |  |  |  |  |  |  |  |
| PSO1 | Students should be able to use techniques and modern engineering tools for engineering practices in their<br>immediate employment and/or entrepreneurial activities.   |  |  |  |  |  |  |  |
| PSO2 | Contribute to the core universal human values and social good to community with respect to industrial safety, health and environment/  |  |  |  |  |  |  |  |

# DEPARTMENT OF MECHANICAL ENGINEERING

# M.E – INDUSTRIAL SAFETY ENGINEERING CURRICULUM & SYLLABI

# Regulation 2020 (Amendment - 1)

(Applicable to candidates admitted in the academic year 2022 – 2023 (Odd Semester) onwards)

Ref. : BOS Meeting No :08 Dated 11-11-2022

# K.S.R. College of Engineering (Autonomous)

(Approved by AICTE, Accredited by NAAC with A++ grade & Affiliated to Anna University) K.S.R. Kalvi Nagar, Tiruchengode – 637 215

Namakkal (Dt), Tamilnadu, India

Email : info@ksrce.ac.in

Website : <u>www.ksrce.ac.in</u>

### K.S.R. COLLEGE OF ENGINEERING : TIRUCHENGODE - 637 215 (Autonomous) <u>DEPARTMENT OF INDUSTRIAL SAFETY\_ENGINEERING</u>

## (REGULATION 2020)

### Vision of the Institution

IV We envision to achieve status as an excellent educational institution in the global knowledge hub, making self-learners, experts, ethical and responsible engineers, technologists, scientists, managers, administrators and entrepreneurs who will significantly contribute to research and environment friendly sustainable growth of the nation and the world.

## **Mission of the Institution**

- **IM 1** To inculcate in the students self-learning abilities that enable them to become competitive and considerate engineers, technologists, scientists, managers, administrators and entrepreneurs by diligently imparting the best of education, nurturing environmental and social needs.
- **IM 2** To foster and maintain mutually beneficial partnership with global industries and Institutions through knowledge sharing, collaborative research and innovation.

### Vision of the Department / Programme: (Industrial Safety Engineering)

**DV** To be a centre of excellence in the field of Mechanical Engineering for providing its students and faculty with opportunities for excel in education and targeted research themes in emerging areas.

### Mission of the Department / Programme: (Industrial Safety Engineering)

| DM 1 | To excel in academic and research activities that meet the industrial and social needs. |
|------|---|
| DM 2 | To develop competent, innovative and ethical mechanical Engineers.                      |

### Programme Educational Objectives (PEOs) :(Industrial Safety Engineering)

## The graduates of the programme will be able to

- PEO 1 Enhance the skills and knowledge on safety, health and environment with respect to industry and research, for executing safe methods in complex engineering problems.
- **PEO 2** Understand the impact of safety, health and environmental solutions on productivity, quality and societal at large.
- **PEO 3** To comply with legal safety, ethical and contractual requirements, professional practices to contribute the community for the sustainable development of society.

# K.S.R. COLLEGE OF ENGINEERING : TIRUCHENGODE - 637 215 (Autonomous) DEPARTMENT OF INDUSTRIAL SAFETY\_ENGINEERING

(REGULATION 2020)

# PROGRAMME OUTCOMES (POs) AND PROGRAMME SPECIFIC OUTCOMES (PSOs)

|      | Programme Outcomes (POs)   |
|------|--|
| P01  | An ability to independently carry out research / investigation and development work to solve practical problems.   |
| PO2  | An ability to write and present a substantial technical report / document.   |
| PO3  | Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be a level higher than the requirements in the appropriate bachelor program. |
| PO4  | An ability to attain, identify and apply knowledge of mathematics, soft computing & soft skill and management for various academic and industrial needs.   |
|      | Programme Specific Outcomes (PSOs)   |
| PSO1 | Students should be able to use techniques and modern engineering tools for engineering practices in their<br>immediate employment and/or entrepreneurial activities.   |
| PSO2 | Contribute to the core universal human values and social good to community with respect to industrial safety, health and environment/  |

# K.S.R COLLEGE OF ENGINEERING ,TIRUCHENGODE -637215 DEPARTMENT OF MECHANICAL ENGINEERING

# **M.E-(INDUSTRIAL SAFETY ENGINEERING)**

# (REGULATION- 2020) (Amendment-1)

The following courses have introduced in the third semester of M.E (Industrial safety Engineering) curriculum R2020 (Electives) for the purpose of emerging areas in the field of welding and advanced materials.

| S.No | Course code | Course Name  | Core<br>/<br>Elective | Semester | Applicable to<br>candidates admitted in<br>the academic year |
|------|-------------|--|-----------------------|----------|--|
| 1.   | IS20382     | Research Methodology and IPR                         | Elective              |          |  |
| 2.   | IS20383     | Advanced Materials                                   | Elective              |          |  |
| 3.   | IS20384     | Welding Economics,<br>Management and Safety          | Elective              |          |  |
| 4.   | IS20385     | Composite Materials and<br>Mechanics                 | Elective              | 111      |  |
| 5.   | IS20386     | Additive Manufacturing                               | Elective              | Ш        |  |

# DEPARTMENT OF MECHANICAL ENGINEERING

# M.E – INDUSTRIAL SAFETY ENGINEERING CURRICULUM & SYLLABI

# Regulation 2020 (Amendment - 2)

(Applicable to candidates admitted in the academic year 2022 - 2023 (Even Semester) onwards)

Ref. : BOS Meeting No : 09 Dated 06-04-2023

# K.S.R. College of Engineering (Autonomous)

(Approved by AICTE, Accredited by NAAC with A++ grade & Affiliated to Anna University) K.S.R. Kalvi Nagar, Tiruchengode – 637 215

Namakkal (Dt), Tamilnadu, India

Email : info@ksrce.ac.in

Website : <u>www.ksrce.ac.in</u>

### K.S.R. COLLEGE OF ENGINEERING : TIRUCHENGODE - 637 215 (Autonomous) <u>DEPARTMENT OF INDUSTRIAL SAFETY\_ENGINEERING</u>

## (REGULATION 2020)

### Vision of the Institution

IV We envision to achieve status as an excellent educational institution in the global knowledge hub, making self-learners, experts, ethical and responsible engineers, technologists, scientists, managers, administrators and entrepreneurs who will significantly contribute to research and environment friendly sustainable growth of the nation and the world.

## **Mission of the Institution**

- **IM 1** To inculcate in the students self-learning abilities that enable them to become competitive and considerate engineers, technologists, scientists, managers, administrators and entrepreneurs by diligently imparting the best of education, nurturing environmental and social needs.
- **IM 2** To foster and maintain mutually beneficial partnership with global industries and Institutions through knowledge sharing, collaborative research and innovation.

### Vision of the Department / Programme: (Industrial Safety Engineering)

**DV** To be a centre of excellence in the field of Mechanical Engineering for providing its students and faculty with opportunities for excel in education and targeted research themes in emerging areas.

### Mission of the Department / Programme: (Industrial Safety Engineering)

| DM 1 | To excel in academic and research activities that meet the industrial and social needs. |
|------|---|
| DM 2 | To develop competent, innovative and ethical mechanical Engineers.                      |

### Programme Educational Objectives (PEOs) :(Industrial Safety Engineering)

### The graduates of the programme will be able to

- **PEO 1** Enhance the skills and knowledge on safety, health and environment with respect to industry and research, for executing safe methods in complex engineering problems.
- **PEO 2** Understand the impact of safety, health and environmental solutions on productivity, quality and societal at large.
- **PEO 3** To comply with legal safety, ethical and contractual requirements, professional practices to contribute the community for the sustainable development of society.

## K.S.R. COLLEGE OF ENGINEERING : TIRUCHENGODE - 637 215 (Autonomous) DEPARTMENT OF INDUSTRIAL SAFETY\_ENGINEERING

(REGULATION 2020)

# PROGRAMME OUTCOMES (POs) AND PROGRAMME SPECIFIC OUTCOMES (PSOs)

|      | Programme Outcomes (POs)  |
|------|---|
| P01  | An ability to independently carry out research / investigation and development work to solve practical problems.  |
| PO2  | An ability to write and present a substantial technical report / document.  |
| PO3  | Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program.<br>The mastery should be a level higher than the requirements in the appropriate bachelor program. |
| PO4  | An ability to attain, identify and apply knowledge of mathematics, soft computing & soft skill and management for various academic and industrial needs.  |
|      | Programme Specific Outcomes (PSOs)  |
| PSO1 | Students should be able to use techniques and modern engineering tools for engineering practices in their<br>immediate employment and/or entrepreneurial activities.  |
| PSO2 | Contribute to the core universal human values and social good to community with respect to industrial safety, health and environment/   |

# K.S.R COLLEGE OF ENGINEERING ,TIRUCHENGODE -637215 DEPARTMENT OF MECHANICAL ENGINEERING

# **M.E-(INDUSTRIAL SAFETY ENGINEERING)**

# (REGULATION- 2020) (Amendment-2)

In the curriculum, Five Elective courses were included instead of Two core courses in the Second semester of M.E -Industrial safety Engineering in R2020. This will be applicable from those who admitted in 2022-2023 Batch students for the purpose of provide opportunities to choose the multi specialization area.

## **SEMESTER -I**

### L IS20111 PRINCIPLES OF SAFETY MANAGEMENT 3 0 0 Course Outcomes : On successful completion of the course, the student will be able to CO1. Analyze the concepts and techniques of safety management functions. .Analyze CO2: Recall about safety audit and to prepare a report for the audit. Understand CO3: Acquire knowledge on the principles of accident and its control methods. Understand CO4: Evaluate the accident cost using supervisors report and data. Understand CO5: Recall the role of various agencies in safety education and training. Understand

### UNIT – I **CONCEPTS AND TECHNIQUES**

Content Evolution of modern safety concept - Safety Management functions - planning for safety for optimization of productivity -productivity, quality and safety - line and staff functions for safety - safety committee - budgeting for safety safety policy - Statutory Provisions for safety management.

Incident Recall Technique (IRT), disaster control, job safety analysis, safety survey, safety inspection, safety sampling, evaluation of performance of supervisors on safety

### UNIT – II **SAFETY AUDIT - INTRODUCTION**

Components of safety audit, types of audit, audit methodology, non conformity reporting (NCR), audit checklist and report review of inspection, remarks by government agencies, consultants, experts - perusal of accident and safety records, formats - implementation of audit indication - liaison with departments to ensure co-ordination - check list - identification of unsafe acts of workers and unsafe conditions in the shop floor

### UNIT – III **SAFETY AUDIT - INTRODUCTION**

Basic Principle of Accident & Prevention concept of an accident, reportable and non reportable accidents, reporting to statutory authorities - principles of accident prevention - accident investigation and reporting - Accident analysis - based on causes & injury - records for accidents, departmental accident reports, documentation of accidents - unsafe act and condition - Accident causation theories - domino sequence - supervisory role - role of safety committee - cost of accident

### UNIT – IV **SAFETY AUDIT - INTRODUCTION**

ANSI (Z16.1) Recommended practices for compiling and measuring work injury experience - permanent total disabilities. permanent partial disabilities, temporary total disabilities - Calculation of accident indices, frequency rate, severity rate, frequency severity incidence, incident rate, accident rate, safety "t" score, safety activity rate - problems.

### UNIT – V SAFETY EDUCATION AND TRAINING

Importance of training - identification of training needs - training methods such as hands on training and tabletop exercise -Programme, seminars, conferences, competitions - method of promoting safe practice - motivation - communication -safety attitude and culture - role of government agencies and private consulting agencies in safety training - creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign - Domestic Safety and Training.

## **SEMESTER - I**

### Ρ С L Т IS20112 **ENVIRONMENTAL SAFETY** 3 0 0 3 Course Outcomes : On successful completion of the course, the student will be able to **Cognitive Level** Gain about the air pollution effects and its control. CO1: Remember CO2: Analyze about the water pollutants and its health hazards. Analyze CO3: Apply the health and safety concepts with respect to hazardous waste management. Apply CO4: Acquire knowledge on environmental measurement and its control. Understand CO5: Demonstrate the health and safety practices in controlling risks for different engineering Understand activities. UNIT - I **AIR POLLUTION** [09]

Classification and properties of air pollutants - Pollution sources - Effects of air pollutants on human beings, Animals, Plants and Materials - automobile pollution - hazards of air pollution - concept of clean coal combustion technology - ultra violet radiation, infrared radiation, radiation from sun - hazards due to depletion of ozone - deforestation - ozone holes -automobile exhausts - chemical factory stack emissions - CFC Statutory provisions related to air pollution.

### UNIT – II WATER POLLUTION

Classification of water pollutants - health hazards - sampling and analysis of water - water treatment - different industrial effluents and their treatment and disposal - advanced wastewater treatment - effluent guality standards and laws - chemical industries, tannery, textile effluents - common treatment - Statutory provisions related to water pollution. [ 09 ]

### UNIT - III HAZARDOUS WASTE MANAGEMENT

Hazardous waste management in India - waste identification, characterization and classification technological options for collection, treatment and disposal of hazardous waste - selection charts for the treatment of different hazardous wastes methods of collection and disposal of solid wastes - health hazards - toxic and radioactive wastes - incineration and vitrification - hazards due to bio-process - dilution standards and restrictions - recycling and reuse - statutory provisions related to hazardous waste management & handling.

### ENVIRONMENTAL MEASUREMENT AND CONTROL UNIT – IV

Sampling and analysis - dust monitor - gas analyzer, particle size analyzer - Lux meter - pH meter - gas chromatograph atomic absorption spectrometer. Gravitational settling chambers - cyclone separators - scrubbers - electrostatic precipitator bag filter - maintenance - control of gaseous emission by adsorption, absorption and combustion methods -Pollution Control Board - laws.

### UNIT - V POLLUTION CONTROL IN PROCESS INDUSTRIES

Pollution control in process industries like cement, paper and petroleum - petroleum products - textile - tanneries thermal power plants - dying and pigment industries - eco-friendly energy

### P С L IS20113 OCCUPATIONAL HEALTH AND INDUSTRIAL HYGIENE 3 0 0 3 Course Outcomes : On successful completion of the course, the student will be able to **Cognitive Level** CO1: Acquire knowledge on the various physiological functions of our body, their effects and Understand control. CO2: Recall the various types of chemical hazards and their control methods. Understand CO3: Analyze the various types of occupational diseases arising out of biological agents. Analyze Demonstrate effectively about the occupational health and toxic nature among the CO4: Apply employees and with society at large. CO5: Recall about the physiology of work with the working environment. Understand [09]

### UNIT – I PHYSICAL HAZARDS

Noise, types, Industrial noise, compensation aspects, noise exposure regulation and control, properties of sound, occupational damage, risk factors, sound measuring instruments, octave band analyzer, noise networks, noise surveys, noise control programmes, industrial audiometry, hearing conservation programmes.

Vibration, types, effects, instruments, surveying procedure, permissible exposure limit and control.

lonizing radiation, types, effects, monitoring instruments, control programmes, OSHA standard - non-ionizing radiations, effects, types, radar hazards, microwaves and radio-waves, lasers TLV - cold environments, hypothermia, wind chill index, control measures - hot environments, thermal comfort, heat stress indices, acclimatization, estimation and control.

### UNIT – II CHEMICAL HAZARDS

Recognition of chemical hazards - dust, fumes, mist, vapor, fog, gases, types, concentration, Exposure vs dose, TLV -Methods of Evaluation, process or operation description, field survey, sampling methodology, Industrial hygiene calculations, Comparison with OSHAS Standard.

Air Sampling instruments, types, measurement procedures, instruments procedures, gas and vapor monitors, dust sample collection devices, personal sampling.

Methods of Control - engineering control, design, maintenance considerations, design specifications - general control methods - training and education

### UNIT - III **BIOLOGICAL AND ERGONOMICAL HAZARDS**

Classification of Bio-hazardous agents - examples, bacterial agents, rickettsial and chlamydial agents, viral agents, fungal, parasitic agents and infectious diseases - biohazard control programmes, employee health programmes - laboratory safety programmes - animal care and handling - biological safety cabinets - building design.

Work Related Musculoskeletal Disorders - carpal tunnel syndrome (CTS) - Tendon pain - disorders of the neck - back injuries.

### UNIT – IV OCCUPATIONAL HEALTH AND TOXICOLOGY

Concept and spectrum of health - functional units and activities of occupational health services, pre - employment and post employment medical examinations - occupational related diseases, levels of prevention of diseases, notifiable occupational diseases such as silicosis, asbestosis, pneumoconiosis, siderosis, anthracosis, aluminosis and anthrax.

Lead - nickel, chromium and manganese toxicity, gas poisoning (such as CO, ammonia, coal and dust etc) their effects and prevention - cardio pulmonary resuscitation, audiometric tests, eye tests, vital function tests.

Industrial toxicology, local, systemic and chronic effects, temporary and cumulative effects, carcinogens entry into human systems.

### UNIT - V **OCCUPATIONAL PHYSIOLOGY**

Man as a system component - allocation of functions - efficiency - occupational work capacity - aerobic and anaerobic work evaluation of physiological requirements of jobs - parameters of measurements - categorization of job heaviness - work organization - stress - strain - fatigue - rest pauses - shift work - personal hygiene Total (L= 45, T = 0) = 45 Periods

| UNIT – | I RANDOM VARIABLES  |       |        |          | [9] |  |  |

One dimensional and Two-dimensional Random variables – Moments – Moment generating function – Standard distributions - Binomial, Poisson, Normal and Exponential distributions..

### UNIT – II CORRELATION, REGRESSION AND ESTIMATION THEORY

Correlation and Regression - Multiple and Partial correlations - Principle of least squares- Fitting straight line trends. Estimation of Parameters – Maximum likelihood estimates – Method of moments.

### UNIT - III TESTING OF HYPOTHESIS

Sampling distributions - Type I and Type II errors - Test of significance for small sample (Student's t- test) - Test of significance for large samples (z-test) - Test of significance of variance (F- test) - Chi-Square test for Independence of attributes.

## UNIT - IV DESIGN OF EXPERIMENTS

Analysis of variance – One-way and two-way classifications – Completely randomized design – Randomized block design –Latin square design.

### UNIT – V QUALITY CONTROL

Introduction – Types of control Charts – X chart – R chart – Control chart for the standard deviations  $\sigma$ -chart – Control chart for C (Number of defects per unit) – Advantage and limitation of Statistical Quality Control.

### INDUSTRIAL SAFETY, HEALTH AND **ENVIRONMENT (SHE) ACTS**

# Course Outcomes : On successful completion of the course, the student will be able to

- CO1. Gain the health and welfare provisions as given in factories act
- CO2: Acquire knowledge on environment act with respect to air and water pollution.

CO3: Analyze the responsibilities of occupier according to manufacture, storage and import of chemical rules

- CO4: Evaluate the other legislation acts pertaining to health and safety.
- List out the various international acts and rules. CO5:

### UNIT – I **FACTORIES ACT - 1948**

IS20115

Statutory authorities - inspecting staff, health, safety, provisions relating to hazardous processes, welfare, working hours, employment of young person's - special provisions - penalties and procedures - Tamilnadu Factories Rules 1950 under Safety and health chapters of Factories Act 1948, forms, registers and notices - Amendments.

### UNIT – II **ENVIRONMENT ACT - 1986**

General powers of the central government, prevention, control and abatement of environmental pollution - Biomedical waste (Management and Handling) Rules, 1989 - The Noise Pollution (Regulation and control) Rules, 2000 - The Batteries (Management and Handling) Rules, 2001 - No Objection certificate from statutory authorities like pollution control board. Air Act 1981 and Water Act 1974:Central and state boards for the prevention and control of air pollution - powers and

functions of boards - prevention and control of air pollution and water pollution - fund - accounts and audit, penalties and procedures. UNIT – III MANUFACTURE, STORAGE AND IMPORT OF CHEMICAL RULES 1989 [ 09 ]

Definitions - duties of authorities - responsibilities of occupier - notification of major accidents - information to be furnished preparation of offsite and onsite plans - list of hazardous and toxic chemicals - safety reports - safety data sheets.

### UNIT – IV OTHER ACTS AND RULES

[09] Indian Boiler Act 1923, Static and Mobile Pressure Vessel Rules (SMPV), Motor Vehicle Rules, Mines Act 1952, Workman Compensation Act, Rules - Electricity Act and Rules - Hazardous Wastes (Management and Handling) Rules, 1989, with amendments in 2000 - The Building and Other Construction Workers Act 1996., Petroleum rules, Gas cylinder rules -Explosives Act 1983 - Pesticides Act.

### UNIT – V INTERNATIONAL ACTS AND STANDARDS

Occupational Safety and Health Act of USA (The Williams - Steiger Act of 1970) - Health and Safety Work Act (HASAWA) 1974, UK - SHAS 18001 - ISO 45001 - American National Standards Institute (ANSI).

### L Т IS20116 HUMAN FACTORS ENGINEERING 3 0 ٥ Course Outcomes : On successful completion of the course, the student will be able to Cognitive Level CO1: Acquire knowledge on ergonomics and its area of application. Understand CO2: Gain about human behaviour, behaviour based system and ABC theory. Understand Apply

- CO3: Apply the concept of anthropometry and work design for standing and seated works.
- CO4: Analyze the man machine system and manual handling task and its hazards
- CO5: Recall the principles for the design of visual displays and design of controls

### UNIT – I **ERGONOMICS AND ANATOMY**

Introduction to ergonomics: The focus of ergonomics, ergonomics and its areas of application in the work system, a brief history of ergonomics, attempts to humanize work, modern ergonomics, future directions for ergonomics.

Anatomy, Posture and Body Mechanics: Some basic body mechanics, anatomy of the spine and pelvis related to posture, posture stability and posture adaptation, low back pain, risk factors for musculoskeletal disorders in the workplace, behavioral aspects of posture, effectiveness and cost effectiveness, research directions.

### UNIT - II **HUMAN BEHAVIOR**

Individual differences, Factors contributing to personality, Fitting the man to the job, Influence of difference on safety, Method of measuring characteristics, Accident Proneness. Motivation, Complexity of Motivation, Job satisfaction. Management theories of motivation, Job enrichment theory. Frustration and Conflicts, Reaction to frustration, Emotion and Frustration. Attitudes, determination of attitudes, changing attitudes, learning, principles of learning, forgetting, motivational requirements.

### ANTHROPOMETRY AND WORK DESIGN FOR STANDING AND SEATED [09] UNIT - III WORKS

Designing for a population of users, percentile, sources of human variability, anthropometry and its uses in ergonomics, principals of applied anthropometry in ergonomics, application of anthropometry in design, design for everyone, anthropometry and personal space, effectiveness and cost effectiveness. Fundamental aspects of standing and sitting, an ergonomics approach to work station design, design for standing workers, design for seated workers, work surface design, visual display units, guidelines for design of static work, effectiveness and cost effectiveness, research directions.

### MAN - MACHINE SYSTEM AND REPETITIVE WORKS AND MANUAL HANDLING UNIT – IV TASK

Applications of human factors engineering, man as a sensor, man as information processor, man as controller - Man vs Machine. Ergonomics interventions in Repetitive works, handle design, key board design- measures for preventing in work related musculoskeletal disorders (WMSDs), reduction and controlling, training Anatomy and biomechanics of manual handling, prevention of manual handling injuries in the work place, design of manual handling tasks, carrying, postural stability.

### HUMAN SKILL & PERFORMANCE AND DISPLAY, CONTROLS AND VIRTUAL UNIT - V [09] **ENVIRONMENTS**

A general information-processing model of the users, cognitive system, problem solving, effectiveness. Principles for the design of visual displays - auditory displays - design of controls - combining displays and controls - virtual (synthetic) environments, research issues.

| CO3:   | Acquire knowledge on different sources of ignition, classes of fires and their extinguishing medium                     |      | . Und | erstan | ıd |
| CO4:   | Ability to know the objective of building fire safety and relevant standards.   |      | Unde  | erstan | d  |
| CO5:   | Apply the principles of explosion and understand about their protecting systems.  |      | A     | ylac   |    |

### UNIT-I PHYSICS AND CHEMISTRY OF FIRE

Fire properties of solid, liquid and gases - fire spread - toxicity of products of combustion - theory of combustion and explosion - vapour clouds - flash fire - jet fires - pool fires - unconfined vapour cloud explosion, shock waves - auto - ignition - boiling liquid expanding vapour explosion - case studies - Flixborough, Mexico disaster, Pasadena Texas, Piper Alpha, Peterborough & Bombay Victoria dock ship explosions.

### UNIT – II FIRE PREVENTION AND PROTECTION

Sources of ignition - fire triangle - principles of fire extinguishing - active and passive fire protection systems - various classes of fires - A, B, C, D - types of fire extinguishers - fire stoppers - hydrant pipes - hoses - monitors - fire watchers layout of stand pipes - fire station - fire alarms and sirens - maintenance of fire trucks - foam generators - escape from fire rescue operations - fire drills - notice - first aid for burns.

### UNIT – III INDUSTRIAL FIRE PROTECTION SYSTEMS

Sprinkler - hydrants - stand pipes - special fire suppression systems like deluge and emulsifier, selection criteria of the above installations, reliability, maintenance, evaluation and standards - alarm and detection systems. Other suppression systems - CO2 system, foam system, dry chemical powder (DCP) system and halon system - need for halon replacement smoke venting. Portable extinguishers - flammable liquids - tank farms - indices of inflammability - fire fighting

### UNIT – IV **BUILDING FIRE SAFETY**

Objectives of fire safe building design, fire load, fire resistant material and fire testing - structural fire protection - structural integrity - concept of egress design - exits - width calculations - fire certificates - fire safety requirements for high rise buildings - snookers.

### UNIT - V EXPLOSION PROTECTING SYSTEMS

Principles of explosion - detonation and blast waves - explosion parameters - Explosion Protection, Containment, Flame Arrestors, isolation, suppression, venting, explosion relief of large enclosure - explosion venting - inert gases, plant for generation of inert gas - rupture disc in process vessels and lines explosion, suppression system based on carbon dioxide (CO 2) and halons - hazards in LPG, ammonia (NH<sub>3</sub>), sulphur dioxide (SO<sub>3</sub>), chlorine (Cl<sub>2</sub>) etc.

### UNIT – I HAZARD, RISK ISSUES AND HAZARD ASSESSMENT

Introduction, hazard, hazard monitoring - risk issue, group or societal risk, individual risk, voluntary and involuntary risk, social benefits Vs technological risk, approaches for establishing risk acceptance levels, risk estimation. Hazard assessment, procedure, methodology, safety audit, checklist analysis, what - if analysis, safety review, Preliminary Hazard Analysis (Pre HA), human error analysis, Hazard Operability studies (HAZOP), safety warning systems.

### UNIT – II COMPUTER AIDED INSTRUMENTS

Applications of Advanced Equipments and Instruments, Thermo Calorimetry, Differential Scanning Calorimeter(DSC), Thermo Gravimetric Analyzer(TGA), Accelerated Rate Calorimeter(ARC), Reactive Calorimeter(RC), Reaction System Screening Tool(RSST) - Principles of operations, Controlling parameters, applications, advantages. Explosive Testing, Deflagration Test, Detonation Test, Ignition Test, Minimum ignition energy Test, Sensitiveness Test, Impact Sensitiveness Test(BAM) and Friction Sensitiveness Test (BAM), Shock Sensitiveness Test, Card Gap Test.

### **RISK ANALYSIS QUANTIFICATION AND SOFTWARES** UNIT - III

[09] Fault Tree Analysis & Event Tree Analysis, Logic symbols, methodology, minimal cut set ranking - Fire Explosion and Toxicity Index (FETI), various indices - Hazard Analysis(HAZAN) - Failure Mode and Effect Analysis(FMEA), Layer of Protection Analysis(LOPA) and Safety integrity level(SIL) - Software on Risk analysis, ALOHA, Hamsagars modules on Heat radiation, Pool fire, Jet, Explosion, Reliability software on FMEA for mechanical and electrical systems.

### UNIT – IV **CONSEQUENCES ANALYSIS**

Logics of consequences analysis - Estimation - Hazard identification based on the properties of chemicals - Chemical inventory analysis - identification of hazardous processes - Estimation of source term, Gas or vapour release, liquid release, two phase release - Heat radiation effects, BLEVE, Pool fires and Jet fire - Gas / vapour dispersion - Explosion, UVCE and Flash fire, Explosion effects and confined explosion - Toxic effects - Plotting the damage distances on plot plant / layout.

### UNIT – V **CREDIBILITY OF RISK ASSESSMENT TECHNIQUES**

Past accident analysis as information sources for Hazard analysis and consequences analysis of chemical accident, Mexico disaster, Flixborough, Bhopal, Seveso, Pasadena, Feyzin disaster (1966), Port Hudson disaster, Vizag HPCL 1997 incident,LG Polymer Vizag incident 2020- convey report, hazard assessment of non-nuclear installation - Rijnmond report, risk analysis of size potentially Hazardous Industrial objects - Rasmussen masses report, Reactor safety study of Nuclear power plant.

### **SEMESTER - II** L **ELECTRICAL SAFETY** 3

### Course Outcomes : On successful completion of the course, the student will be able to **Cognitive Level** CO1: Familiarize the basic concepts in electrical circuit and hazards involved in it. Remember Analyze the different types of electrical hazards in industries CO2: Acquire knowledge about the different types of protection systems. CO3: Understand

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

- CO4: Apply the knowledge in the selection, installation, operation and maintenance of portable tools
- CO5: Classify the different hazardous zones in Industries.

### UNIT – I CONCEPTS AND STATUTORY REQUIREMENTS

Introduction - electrostatics, electro magnetism, stored energy, energy radiation and electromagnetic interference - Working principles of electrical equipment - Indian electricity act and rules - statutory requirements from electrical inspectorate -International standards on electrical safety - first aid - cardio pulmonary resuscitation(CPR).

### UNIT - II **ELECTRICAL HAZARDS**

Primary and secondary hazards - shocks, burns, scalds, falls - human safety in the use of electricity.

Energy leakage - clearances and insulation - classes of insulation - voltage classifications - excess energy - current surges -Safety in handling of war equipments - over current and short circuit current - heating effects of current - electromagnetic forces - corona effect - static electricity - definition, sources, hazardous conditions, control, electrical causes of fire and explosion - ionization, spark and arc-ignition energy - national electrical safety code ANSI. High voltage Hazards,

Lightning, hazards, lightning arrestor, installation - earthing, specifications, earth resistance, earth pit maintenance.

### UNIT – İİI **PROTECTION SYSTEMS**

[ 09 ] Fuse, circuit breakers and overload relays - protection against over voltage and under voltage - safe limits of amperage voltage - safe distance from lines - capacity and protection of conductor - joints and connections, overload and short circuit protection - no load protection - earth fault protection.

FRLS insulation - insulation and continuity test - system grounding - equipment grounding - earth leakage circuit breaker (ELCB) - cable wires - maintenance of ground - ground fault circuit interrupter - use of low voltage - electrical guards -Personal protective equipment - safety in handling hand held electrical appliances tools and medical equipments.

### UNIT – IV SELECTION, INSTALLATION, OPERATION AND MAINTENANCE

[ 09 ] Role of environment in selection - safety aspects in application - protection and interlock - self diagnostic features and fail safe concepts - lock out and work permit system - discharge rod and earthing devices - safety in the use of portable tools cabling and cable joints - preventive maintenance.

### UNIT – V HAZARDOUS ZONES

Classification of hazardous zone - Intrinsically safe and explosion proof electrical apparatus - increase safe equipment -their selection for different zones - temperature classification - grouping of gases - use of barriers and isolators -equipment certifying agencies. Total (L= 45, T = 0) = 45 Periods

# INDUSTRIAL SAFETY LABORATORY

## Course Outcomes : On successful completion of the course, the student will be able to

- CO1: Analyze about the various equipments to bring out the safety environment in the industry.
   CO2: Gain knowledge about the various sources of particular matter and assess the impact of air pollution.
- CO3: Learn about the usage of fire extinguishers and its operation.
- CO4: Acquire knowledge on insulation and earth resistance.
- CO5: Demonstrate the use of software and hence to predict the real situations on major accidents.

# LIST OF EXPERIMENTS

- 1. Carryout the Noise level Measurement for a given area and compare with the standards.
- 2. Find the illumination level of a given area using the Lux meter.
- 3. Find the percentage of CO<sub>2</sub>, CO, SO<sub>2</sub> and O<sub>2</sub> present in the exhaust gas of a given diesel/petrol engine using Exhaust gas analyzer under different loading conditions.
- 4. Find the total mass of the suspended particulate matter in a given area using the respirable dust sampler.
- 5. Determine the earth resistance and resistivity by using the earth resistance for the given soil.
- 6. Find the insulation resistance for the given motor and cable using insulation tester.
- 7. Identify the given PPE's and explain in detail about its usage.
- 8. Identify the various types of fire extinguishers and elaborate in detail about its operation and method of extinguishing.
- 9. Find the toxic and flammable level of the given chemical using dispersion modeling (ALOHA) software.
- 10. What is meant by First-aid and what are the items to be kept in the first-aid box? Explain briefly.

## LIST OF EQUIPMENTS

| 1.  | Noise level meter                         | - 1 no. |
|-----|---|---------|
| 2.  | Lux meter                                 | - 1 no. |

• By mutual discussions with the faculty in-charge the student can decide a topic related to area /subject.

- The student is expected to collect at least 20 such research papers published in the last 5 years.
- Using OHP / Power Point, the student has to make presentation for 20 minutes followed by 10 minutes discussion.
- The students should visit an industry, has to make five presentations and a report of the same in the semester.
- The student has to write a technical report for about 30 50 pages (Title page, One page Abstract, Review of
  Research paper under various sub headings, concluding remarks and list of references). The technical report has
  to be submitted to the course coordinator one week before the final presentation, after the approval of the faculty incharge.

| UNIT - I | INTRODUCTION TO QUALITY ENGINEERING AND LOSS FUNCTION  |            |        |        | [9] |

Quality value and engineering - overall quality system - quality engineering in product design - quality engineering in design of production processes - quality engineering in production - quality engineering in service. Loss function derivation - use loss function for products / system - justification of improvements - loss function and inspection - quality evaluations and tolerances - N type, S type, L type.

### UNIT - II ON-LINE QUALITY CONTROL

On-line feedback quality control variable characteristics - control with measurement interval - one unit, multiple units -control systems for lot and batch production. On-line process parameter control variable characteristics - process parameter tolerances feedback control systems - measurement error and process control parameters.

| UNIT - III | ON-LINE QUALITY CONTROL ATTRIBUTES AND METHODS FOR PROCESS<br>IMPROVEMENT | [9] |
|------------|---|-----|
|------------|---|-----|

Checking intervals - frequency of process diagnosis. Production process improvement method - process diagnosis improvement methods.

### UNIT - IV QUALITY ENGINEERING AND TPM

Preventive maintenance schedules - PM schedules for functional characteristics - PM schedules for large scale systems. Quality tools - fault tree analysis, event tree analysis, failure mode and effect analysis - ISO quality systems.

### UNIT - V SIX SIGMA AND ITS IMPLEMENTATION

Introduction - definition - methodology - impact of implementation of six sigma - DMAIC method - roles and responsibilities - leaders, champion, black belt, green belts. Do's and dont's - readiness of organization - planning - management role - six sigma tools - sustaining six sigma.

K.S.R.C.E-CURRICULUM AND SYLLABI(R 2020)

#### K.S.R. COLLEGE OF ENGINEERING (Autonomous) R 2020 SEMESTER- II / III ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEMS L Ρ IS20362 3 0 0 (Elective) Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Explore about the measuring intelligence, historical back ground and its applications. Understand CO2: Recall the cognitive psychology for identifying real objects and factory vision systems Understand CO3: Acquire knowledge engineering based on fuzzy logic and sematic networks. Remember CO4: Apply the concept of expert system for knowledge acquisition, system structure and its Apply applications. CO5: Familiarize about the neural network architecture and its learning methods. Understand UNIT - I INTRODUCTION [9]

С

3

[10]

[10]

[9]

[7]

Total (L= 45, T = 0) = 45 Periods

Intelligence - definition, types cognitive aspect approach, measuring intelligence - early efforts, IQ and AI: aspects of intelligence - learning, problem solving, creativity, behavior and biology. Artificial intelligence: Historical background, applications of AI, objections and myths, AI languages: Introduction to PROLOG and LISP.

#### UNIT - II **COGNITIVE PSYCHOLOGY**

The mind - informative and cybernetics, components for thought, modes of perception - visual, auditory and other systems: memory mechanisms, problem solving - planning, search, the GPS systems; types of learning - rote, parameter, method and concept: Game playing, reasoning, Artificial Vision - picture processing - identifying real objects; Vision programs, factory vision systems.

#### UNIT - III **KNOWLEDGE ENGINEERING**

Introduction - role of knowledge engineer, knowledge representation - psychology, production rules, logic and programming, Common sense and fuzzy logic, semantic networks, learning systems.

#### UNIT - IV EXPERT SYSTEMS

Introduction, knowledge acquisition for expert system, features of expert systems - system structure, inference engines, uncertainties, memory mechanisms, range of applications, actual expert systems - VP expert. Assignment - development of a simple expert system.

#### UNIT - V INTRODUCTION TO NEURAL NETWORKS

Neural Network Architecture - Learning methods - Architecture of a Back Propagation Network - Selection of parameters -Simple variation of BPN.

#### K.S.R. COLLEGE OF ENGINEERING (Autonomous) SEMESTER- II / III WORK STUDY AND ERGONOMICS Р С L Т IS20363 0 (Elective) 3 0 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** Understand CO1: Familiarize on work study and study of operation and its application. CO2: Analyze about applications of ergonomic principle in the shop floor and physiology of Analyze workers. CO3: Explore the concepts of PPE's and its ergonomic considerations. Understand CO4: Recall about various machine tools, process and equipment design. Understand CO5: Acquire knowledge on man-machine systems. Understand

#### UNIT - I WORK STUDY

Study of operations - work content - work procedure - breakdown - human factors - safety and method study - methods and movements at the workplace - substitution with latest devices - robotic concepts - applications in hazardous workplaces productivity, quality and safety (PQS).

#### UNIT - II ERGONOMICS

Definition - applications of ergonomic principles in the shop floor - work benches - seating arrangements - layout of electrical panels - switch gears - principles of motion economy - location of controls - display locations - machine foundations - work platforms, fatigue, physical and mental strain - incidents of accident - physiology of workers.

#### UNIT - III PERSONAL PROTECTION

Concepts of personal protective equipment - types - selection of PPE - invisible protective barriers - procurement, storage, inspection and testing - quality - standards - ergonomic considerations in personal protective equipment design.

#### UNIT - IV PROCESS AND EQUIPMENT DESIGN

Process design - equipment - instrument - selection - concept modules - various machine tools - in-built safety - machine layout - machine guarding - safety devices and methods - selection, inspection, maintenance and safe usage - statutory provisions, operator training and supervision - hazards and prevention.

#### UNIT - V MAN MACHINE SYSTEMS

Job and personal risk factors - standards - selection and training - body size and posture - body dimension (static/dynamic) adjustment range - penalties - guide lines for safe design and postures - evaluation and methods of reducing posture strain. Man-machine interface - controls - types of control - identification and selection - types of displays - compatibility and stereotypes of important operations - fatigue and vigilance - measurement characteristics and strategies for enhanced performance.

#### UNIT - I **HISTORY OF SAFETY LEGISLATION**

regulations.

History of dock safety statues in India-background of present dock safety statues- dock workers (safety, health and welfare) act 1986 and the rules and regulations framed there under, other statues like marking of heavy packages act 1951 and the rules framed there under - manufacture, storage and import of hazardous chemicals. Rules 1989 framed under the environment (protection) act, 1989 - few cases laws to interpret the terms used in the dock safety statues.

Responsibility of different agencies for safety, health and welfare involved in dock work - responsibilities of port authorities dock labour board - owner of ship master, agent of ship - owner of lifting appliances and loose gear etc. - employers of dock workers like stevedores - clearing and forwarding agents - competent persons and dock worker. Forums for promoting safety and health in ports - safe committees and advisory committees, their functions, training of dock workers.

#### UNIT - II WORKING ON BOARD THE SHIP

Types of cargo ships - working on board ships - Safety in handling of hatch beams - hatch covers including its marking, mechanical operated hatch covers of different types and its safety features - safety in chipping and painting operations on board ships - safe means of accesses - safety in storage etc. - illumination of decks and in holds - hazards in working inside the hold of the ship and on decks - safety precautions needed - safety in use of transport equipment - internal combustible engines like fort-lift trucks - pay loaders etc. Working with electricity and electrical management - storages - types, hazardous cargo.

#### UNIT - III LIFTING APPLIANCES

Different types of lifting appliances - construction, maintenance and use, various methods of rigging of derricks, safety in the use of container handling / lifting appliances like portainers, transtainer, top lift trucks and other containers - testing and examination of lifting appliances - portainers - transtainers - top lift trucks - derricks in different rigging etc. Use and care of synthetic and natural fiber ropes - wire rope chains, different types of slings and loose gears.

#### UNIT - IV TRANSPORT EQUIPMENT

The different types of equipment for transporting containers and safety in their use safety in the use of self-loading container vehicles, container side lifter and fork lift truck, dock railways, conveyors and cranes. Safe use of special lift trucks inside containers - testing, examination and inspection of containers - carriage of dangerous goods in containers and maintenance and certification of containers for safe operation Handling of different types of cargo - stacking and un stacking both on board the ship and ashore - loading and unloading of cargo identification of berths/walking for transfer operation of specific chemical from ship to shore and vice versa - restriction of loading and unloading operations.

### UNIT - V **EMERGENCY ACTION PLAN AND DOCK WORKERS (SHW) REGULATIONS 1990**

Emergency action Plans for fire and explosions - collapse of lifting appliances and buildings, sheds etc. - gas leakages and precautions concerning spillage of dangerous goods etc. - Preparation of on-site emergency plan and safety report. Dock workers (SHW) rules and regulations 1990 - related to lifting appliances, Container handling, loading and unloading, handling of hatch coverings and beams, cargo handling, conveyors, dock railways, forklift.

### Total (L= 45, T = 0) = 45 Periods

#### K.S.R. COLLEGE OF ENGINEERING (Autonomous) R 2020 SEMESTER- II / III SAFETY IN CONSTRUCTION Р С L Т IS20365 3 0 0 (Elective) 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Demonstrate about the accident causes and the management systems. Understand CO2: Familiarize about the hazards in construction and their prevention. Understand Analyze the safety procedure for working at heights during construction. CO3: Analyze CO4: Apply knowledge selecting, operations, inspection and testing of various construction Apply machinerv. CO5: List out construction regulations and Indian standards for construction and demolition Remember work.

### UNIT - I ACCIDENTS CAUSES AND MANAGEMENT SYSTEMS

Problems impeding safety in construction industry - causes of fatal accidents, types and causes of accidents related to various construction activities, human factors associated with these accident - construction regulations, contractual clauses - Pre contract activates, preconstruction meeting - design aids for safe construction - permits to work - quality assurance in construction – compensation - recording of accidents and safety measures - education and training.

### UNIT - II HAZARDS OF CONSTRUCTION AND PREVENTION

Excavations, basement and wide excavation, trenches, shafts - scaffolding, types, causes of accidents, scaffold inspection checklist - false work - erection of structural frame work, dismantling - tunneling - blasting, pre blast and post blast inspection - confined spaces - working on contaminated sites - work over water - road works - power plant constructions - construction of high rise buildings.`

### UNIT - III WORKING AT HEIGHTS

Fall protection in construction OSHA 3146 - OSHA requirement for working at heights, Safe access and egress - safe use of ladders - Scaffoldings, requirement for safe work platforms, stairways, gangways and ramps - fall prevention and fall protection, safety belts, safety nets, fall arrestors, controlled access zones, safety monitoring systems - working on fragile roofs, work permit systems, height pass - accident case studies.

### UNIT - IV SAFETY IN CONSTRUCTION MACHINERY

Selection, operation, inspection and testing of hoisting cranes, mobile cranes, tower cranes, crane inspection checklist builder's hoist, winches, chain pulley blocks - use of conveyors - concrete mixers, concrete vibrators - safety in earth moving equipment, excavators, dozers, loaders, dumpers, motor grader, concrete pumps, welding machines, use of portable electrical tools, drills, grinding tools, manual handling scaffolding, hoisting cranes - use of conveyors and mobile cranes manual handling.

### UNIT - V SAFETY IN DEMOLITION WORK

Safety in demolition work, manual, mechanical, using explosive - keys to safe demolition, pre survey inspection, method statement, site supervision, safe clearance zone, health hazards from demolition - Indian standard - trusses, girders and beams - first aid - fire hazards and preventing methods - interesting experiences at the construction site against the fire accidents. Total (L= 45, T = 0) = 45 Periods

#### K.S.R. COLLEGE OF ENGINEERING (Autonomous) R 2020 SEMESTER- II / III TRANSPORT SAFETY Р С Т L IS20366 0 0 3 (Elective) 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Acquire knowledge on causes of accidents due to drivers and pedestrians. Understand CO2: Gain knowledge on inspection and maintenance of vehicles. Understand CO3: Recall about the safety in road and rail transportation. Understand CO4: Demonstrate about the safety in air transportation and shipping. Understand CO5: Familiarize on shop floor and repair shop safety. Understand

#### UNIT - I **OVERVIEW OF TRANSPORT SAFETY**

Introduction - factors for improving safety on roads - causes of accidents due to drivers and pedestrians - design, selection, operation and maintenance of motor trucks - preventive maintenance - check lists - motor vehicles act - motor vehicle insurance and surveys.

Driver safety programme - selection of drivers - driver training - tacho-graph - driving test - driver's responsibility - accident reporting and investigation procedures - fleet accident frequency - safe driving incentives - slogans in driver cabin - motor vehicle transport workers act - driver relaxation and rest pauses - speed and fuel conservation - emergency planning and Haz mat codes.

#### UNIT - II TRANSPORTATION OF HAZARDOUS GOODS

Transport emergency card (TREM) - driver training - parking of tankers on the highways - speed of the vehicle - warning symbols - design of the tanker lorries - static electricity - responsibilities of driver - inspection and maintenance of vehicles check list - loading and decanting procedures - communication.

### UNIT - III SAFETY IN ROAD AND RAIL TRANSPORTATION

[10] Road alignment and gradient - reconnaissance - ruling gradient - maximum rise per k.m. - factors influencing alignment like attractive resistance, attractive force, direct alignment, vertical curves-breaking characteristics of vehicle - skidding restriction of speeds - significance of speeds - pavement conditions - sight distance - safety at intersections - traffic control lines and guide posts - guard rails and barriers - street lighting and illumination overloading - concentration of driver.

Introduction to Rail Transportation - Rail Road Track - Materials and Cross section - Locomotives, Rail Car and Types - Rail road Worker Safety - Safety Performance, Gate Crossings and Trespassers - Signals and Communications, Types of rail road traffic control, other communication features - High Speed Rail Systems - Rail Road Construction and Maintenance methods, Construction and maintenance Equipment - Track Maintenance.

#### SAFETY IN OTHER TRANSPORT SYSTEMS UNIT - IV

Introduction to Air Transportation - Trends in Air Transportation - Safety in Runway - Air Transportation System - Flight Maintenance, Construction and Safety - Storage and Handling of Fuels - Environmental Aspects of Air Transportation.

Types of cargo ships - working on board ships marking, safety in Shipping and painting operations on board ships - safe means of accesses - safety in storage etc - illumination of decks and in holds - hazards in working inside the hold of the ship and on decks - safety precautions needed.

### UNIT - V SHOP FLOOR AND REPAIR SHOP SAFETY

Transport precautions - safety on manual, mechanical handling equipment operations - safe driving - movement of cranes conveyors etc., servicing and maintenance equipment - grease rack operation - wash rack operation - battery charginggasoline handling - other safe practices - off the road motorized equipment.

Plant railway: Clearance - track - warning methods - loading and unloading - moving cars - safety practices. Total (L= 45, T = 0) = 45 Periods

#### SEMESTER- II / III **FIREWORKS SAFETY** Р С L Т IS20367 0 0 (Elective) 3 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Acquire knowledge on the properties of the chemicals used in the fireworks. Understand CO2: Familiarize about the static charge and dust in fireworks factories. Understand CO3: Recall about the various types of process in risk related fireworks. Understand CO4: Analyze the material handling techniques and transportation of explosives in fireworks Analyze CO5: Determine the concepts of waste control and user safety in fireworks .Understand

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

### UNIT – I **PROPERTIES OF FIREWORKS CHEMICALS**

Fire properties - potassium nitrate (KNO<sub>3</sub>), potassium chlorate (KClO<sub>3</sub>), barium nitrate (BaNO<sub>3</sub>), calcium nitrate (CaNO<sub>3</sub>), Sulphur (S), Phosphorous (P), Antimony (Sb), Pyro Aluminum (A1) powder - Reactions - metal powders, Borax, ammonia (NH<sub>3</sub>) - Strontium Nitrate, Sodium Nitrate, Potassium per chloride. Fire and explosion, impact and friction sensitivity.

#### UNIT – II STATIC CHARGE AND DUST

Concept - prevention - earthling - copper plates - dress materials - static charge meter lightning, causes - effects - hazards in fireworks factories - lightning arrestor: concept - installation - earth pit - maintenance - resistance - legal requirements - case studies.

Dust: size - respirable, non-respirable - biological barriers - hazards - personal protective equipment - pollution prevention. UNIT - III **PROCESS SAFETY** [8]

Safe - quantity, mixing - filling - fuse cutting - fuse fixing - finishing - drying at various stages - packing - storage - hand tools - materials, layout: building - distances - factories act - explosive act and rules - fire prevention and control - risk related fireworks industries.

#### UNIT - IV MATERIAL HANDLING

Manual handling - wheel barrows - trucks - bullock carts - cycles - automobiles - fuse handling - paper caps handling -nitric acid handling in snake eggs manufacture - handling the mix in this factory - material movement - godown - waste pit.

Transportation: Packing - magazine - design of vehicles for explosive transports loading into automobiles - transport restrictions - case studies - overhead power lines - driver habits - intermediate parking - fire extinguishers - loose chemicals handling and transport.

#### UNIT - V WASTE CONTROL AND USER SAFETY

Concepts of wastes - wastes in fireworks - disposal - spillages - storage of residues.

Consumer anxiety - hazards in display - methods in other countries - fires, burns and scalds - sales outlets - restrictions role of fire service.

Total (L= 45, T = 0) = 45 Periods

SEMESTER- II / III SAFETY IN POWDER HANDLING С Ρ L Т IS20368 3 0 0 (Elective) 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Acquire knowledge on powder classification, its physical, chemical and other Understand properties. CO2: Demonstrate about the metal powders and their characterization. Understand Familiarize about Industrial dust and their explosion. CO3: Understand CO4: Gain knowledge on dust handling plants and electro static hazards. Understand CO5: Analyze about the dust evaluation methods and their control. Analyze [8]

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

#### UNIT - I INTRODUCTION

Powder classification - physical, chemical and other properties - metal powders - other non-metallic powders, Safety in cement, fly ash, guarry, sawdust, paint - handling methods - manual, mechanical, automatic - charges on powders -charge distribution - charging of powders.

#### UNIT - II METAL POWDERS AND CHARACTERIZATION

Atomization, types - milling - electro deposition - spray drying, Production of iron powder, Aluminum powder, Titanium screening & cleaning of metals - explosivity and pyrophoricity - toxicity.

Particle size and size distribution - measurement, types and significance - particle shape analysis, methods, surface area, density, porosity, flow rate - testing.

Metal powders, applications as fuel, solid propellants, explosives, pyrotechnics. Hazards in metal powder industries and safety principles.

#### UNIT - III DUST EXPLOSION

Industrial dust, dust explosion accidents - explosibility characteristics, minimum explosive concentration, minimum ignition energy, explosion pressure characteristics, maximum permissible oxygen concentration - explosibility tests, Hartmann vertical tube apparatus, horizontal tube apparatus, inflammatory apparatus, Godbert and Green ward furnace. Explosibility classification - hybrid test - gas mixtures - dust ignition sources - dust explosion prevention - dust explosion protection - dust explosion venting, vent coefficient, various methods of design - venting of ducts and pipes - dust fire.

DUST HANDLING PLANTS AND ELECTRO STATIC HAZARDS UNIT - IV

Grinding mills, conveyors, bucket elevators, dust separators, dust filters, cyclones, driers, spray driers, silos, grain elevators, typical applications, hazards and safety practices.

Electrostatic charges-energy released - type of discharge - spark - carona - insulating powders - propagating brush discharge - discharge in bulk lightning hazards in powder coating - electroplating.

#### UNIT - V DUST EVALUATION AND CONTROL

Dust Evaluation, methodology, Quantitative, sampling, measurements - control approaches and strategies - control of dust sources, dust transmission - role of workers, PPE and work practice - housekeeping - storage - labeling - warning sign restricted areas - Environmental protections.

Evaluation procedures and control measures for particulates (Respirable), Asbestos and other fibers, silica in coal mine -NIOSH guide to the selection and use of particulate respirators - case studies.

K.S.R. COLLEGE OF ENGINEERING (Autonomous) SEMESTER- II / III NUCLEAR ENGINEERING AND SAFETY Р С L Т IS20369 0 3 0 (Elective) 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Explore the basic concepts of fission process and activity . Understand CO2: Analyze the control requirements in design considerations Analyze CO3: Classify the reactor types and their role of power generation in India. Understand CO4: Apply the safe design principles of nuclear reactors and their safety . Apply CO5: Acquire knowledge on radiation control, its exposure and their disposal practices. Understand

#### UNIT - I INTRODUCTION

Binding energy - fission process - radio activity - alpha, beta and gamma rays radioactive decay - decay schemes - effects of radiation - neutron interaction - cross section - reaction rate - neutron moderation - multiplication - scattering - collision - fast fission - resonance escape - thermal utilization - criticality.

#### UNIT - II **REACTOR CONTROL**

Control requirements in design considerations - means of control - control and shut down rods - their operation and operational problems - control rod worth - control instrumentation and monitoring - online central data processing system.

#### UNIT - III **REACTOR TYPES**

Boiling water reactors - radioactivity of steam system - direct cycle and dual cycle power plants - pressurized water reactors and pressurized heavy water reactors - fast breeder reactors and their role in power generation in the Indian context conversion and breeding - doubling time - liquid metal coolants - nuclear power plants in India.

#### SAFETY OF NUCLEAR REACTORS UNIT - IV

Safety design principles - engineered safety features - site related factors - safety related systems - heat transport systems reactor control and protection system - fire protection system - quality assurance in plant components - operational safety safety regulation process - public awareness and emergency preparedness. Accident Case studies - Three Mile island and Chernobyl accident.

#### UNIT - V **RADIATION CONTROL**

Radiation shielding - radiation dose - dose measurements - units of exposure - exposure limits - barriers for control of radioactivity release - control of radiation exposure to plant personnel - health physics surveillance - waste management and disposal practices - environmental releases.

| UNIT – I  | INTRODUCTION  |              |                 |     | [9] |  |  |

Introduction to process flow charts of i) short staple spinning, ii) long staple spinning, iii) viscose rayon and synthetic fibre, manufacturer, iv) spun and filament yarn to fabric manufacture, v) jute spinning and jute fabric manufacture-accident hazard, guarding of machinery and safety precautions in opening, carding, combing, drawing, flyer frames and ring frames, doubles, rotor spinning, winding, warping, softening / spinning specific to jute.

### UNIT – II TEXTILE HAZARDS - I

Accident hazards i) sizing processes - cooking vessels, transports of size, hazards due to steam ii) Loom shed - shuttle looms and shuttles looms iii) knitting machines iv) non-woven's.

### UNIT – III TEXTILE HAZARDS – II

Scouring, bleaching, dyeing, punting, mechanical finishing operations and effluents in textile processes.

### UNIT – IV HEALTH AND WELFARE

Health hazards in textile industry related to dust fly and noise generation - control measures - relevant occupational diseases, personal protective equipment - health and welfare measures specific to textile industry, special precautions for specific hazardous work environments.

### UNIT – V SAFETY STATUS

Relevant provision of factories act and rules and other statues applicable to textile industry - effluent treatment and waste disposal in textile industry.

Total (L= 45, T = 0) = 45 Periods

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

#### UNIT – I **OPEN CAST MINES**

Causes and prevention of accident from: Heavy machinery, belt and bucket conveyors, drilling, hand tools - pneumatic systems, pumping, water, dust, electrical systems and fire prevention. Garage safety - accident reporting system - working condition - safe transportation - handling of explosives.

#### UNIT – II UNDERGROUND MINES

Fall of roof and sides - effect of gases-fire and explosions - water flooding - warning sensors - gas detectors - occupational hazards - working conditions - winding and transportation.

#### UNIT - III TUNNELLING

Hazards from: ground collapse, inundation and collapse of tunnel face, falls from platforms and danger from falling bodies. Atmospheric pollution (gases and dusts) - trapping - transport - noise - electrical hazards - noise and vibration from: pneumatic tools and other machines - ventilation and lighting - personal protective equipment.

#### UNIT – IV **RISK ASSESSMENT**

Basic concepts of risk - reliability and hazard potential - elements of risk assessment - statistical methods - control charts appraisal of advanced techniques - fault tree analysis - failure mode and effect analysis - guantitative structure - activity relationship analysis - fuzzy model for risk assessment.

#### UNIT – V ACCIDENT ANALYSIS AND MANAGEMENT

Accidents classification and analysis - fatal, serious, minor and reportable accidents - safety audits - recent development of safety engineering approaches for mines - frequency rates - accident occurrence - investigation - measures for improving safety in mines - cost of accident - emergency preparedness - disaster management. Total (L= 45, T = 0) = 45 Periods

#### R 2020 K.S.R. COLLEGE OF ENGINEERING (Autonomous) SEMESTER- II / III PLANT LAYOUT AND MATERIALS HANDLING С Ρ Т IS20373 3 (Elective) 0 0 3 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Acquire knowledge on plant locations and the safe storage of chemicals. Understand Analyze CO2: Analyze the plant layout and their safety for various types of process industry. CO3: Determine the principles of good ventilation and illumination . Understand CO4: Gain knowledge on the benefits of an efficient material handling system and lifting Understand tackles. CO5: Classify the various types of mechanical material handling devices. Understand [10]

#### UNIT - I PLANT LOCATION

Selection of plant locations, territorial parameters, considerations of land, water, electricity, location for waste treatment and disposal, further expansions. Safe location of chemical storages, LPG, LNG, CNG, acetylene, ammonia, chlorine, explosives and propellants.

#### UNIT – II PLANT LAYOUT

Safe layout, equipment layout, safety system, fire hydrant locations, fire service rooms, facilities for safe effluent disposal and treatment tanks, site considerations, approach roads, plant railway lines, security towers.

Safe layout for process industries, engineering industry, construction sites, pharmaceuticals, pesticides, fertilizers, refineries, food processing, nuclear power stations, thermal power stations, metal powders manufacturing, fireworks and match works.

#### WORKING CONDITIONS UNIT – III

Principles of good ventilation, purpose, physiological and comfort level types, local and exhaust ventilation, hood and duct design, air conditioning, ventilation standards, application,

Purpose of lighting, types, advantages of good illumination, glare and its effect, lighting requirements for various work, standards - Housekeeping, principles of 5S.

### UNIT – IV MANUAL MATERIAL HANDLING AND LIFTING TACKLES

Preventing common injuries, lifting by hand, team lifting and carrying, handling specific shape machines and other heavy objects - accessories for manual handling, hand tools, jacks, hand trucks, dollies and wheel barrows - storage of specific materials - problems with hazardous materials, liquids, solids - storage and handling of cryogenic liquids - shipping and receiving, stock picking, dock boards, machine and tools, steel strapping and sacking, glass and nails, pitch and glue, boxes and cartons and car loading - personal protection - ergonomic considerations.

Fiber rope, types, strength and working load inspection, rope in use, rope in storage - wire rope, construction, design factors, deterioration causes, sheaves and drums, lubrication, overloading, rope fitting, inspection and replacement - slings, types, method of attachment, rated capacities, alloy chain slings, hooks and attachment, inspection.

#### UNIT – V **MECHANICAL MATERIAL HANDLING**

Hoisting apparatus, types - cranes, types, design and construction, guards and limit devices, signals, operating rules, maintenance safety rules, inspection and inspection checklist - conveyors, precautions, types, applications.

Powered industrial trucks, requirements, operating principles, operators selection and training and performance test, inspection and maintenance, electric trucks, gasoline operated trucks, LPG trucks - power elevators, types of drives, hoist way and machine room emergency procedure, requirements for the handicapped, types- Escalator, safety devices and brakes, moving walks - man lifts, construction, brakes, inspection.

K.S.R.C.E-CURRICULUM AND SYLLABI(R 2020) 26

- K.S.R. COLLEGE OF ENGINEERING (Autonomous) SEMESTER- II / III **DISASTER MANAGEMENT** Ρ Т IS20374 3 (Elective) 0 0 Course Outcomes : On Completion of this course, the student will be able to **Cognitive Level** CO1: Recall about the concepts of disaster management and meteorological phenomena. Understand CO2: Familiarize about the technological disasters and its case study. Understand CO3: Acquire knowledge on environmental pollution and its impact assessment. Understand
- Apply the concepts of marine pollution and its control with global environmental issues. CO4: Analyze environmental education with risk assessment process for different disaster CO5: types.

#### UNIT – I INTRODUCTION

Philosophy of disaster management - Introduction to disaster mitigation - hydrological, coastal and marine disasters atmospheric disasters - geological, meteorological phenomena - mass movement and land disasters - forest related disasters - wind and water related disasters - deforestation - use of space technology for control of geological disasters -Master thesis.

#### UNIT - II **TECHNOLOGICAL DISASTERS**

Technological Disasters - Case studies of Technology disasters with statistical details Emergencies and control measures -APELL - Onsite and Offsite emergencies - Crisis management groups - Emergency centers and their functions throughout the country - Software's on emergency controls - Monitoring devices for detection of gases in the atmosphere - Right to know act.

#### UNIT - III ENVIRONMENTAL POLLUTION

Introduction to sustainable development - Bio - diversity - atmospheric pollution - global warming and Ozone Depletion -ODS banking and phasing out - sea level rise - El Nino and climate changes - eco friendly products - green movements green philosophy - environmental policies - Environmental Impact Assessment - case studies - Life cycle.

#### UNIT – IV MARINE POLLUTION

Offshore and onshore drilling - control of fires - Case studies - Marine pollution and control - Toxic, hazardous and Nuclear wastes - state of India's and Global environmental issues carcinogens - complex emergencies - Earthquake disasters - the nature - extreme event analysis - the immune system - proof and limits.

#### UNIT – V **ENVIRONMENTAL EDUCATION**

Environmental education - population and community ecology - natural resources conservation - environmental protection and law - Research methodology and systems analysis - Policy initiatives and future prospects - Risk assessment process, assessment for different disaster - types - assessment data use, destructive capacity - risk adjustment - choice - loss acceptance - disaster aid - public liability insurance - stock taking and vulnerability analysis - disaster profile of the country national policies - objectives and standards - physical event modification - preparedness, forecasting and warning, land use planning.

| CO5:  | Acquire knowledge on environmental impact assessment, types & control.                    | Understand |                 |      |     |  |  |
| UNIT - I  | OHSAS STANDARD  |            |                 |      | [9] |  |  |
| 1.0.1.0   |   | 1          |                 |      | e   |  |  |

Introduction - development of OHSAS standard - Structure and features of OSHAS 18001 - benefits of certificationcertification procedure - OH & S management system element, specification and scope - correspondence between OHSAS 18001, ISO 14001:1996 and ISO 9001:1994 – guidelines (18002:2000) for implementing OHSAS 18001.

#### UNIT - II **OHSAS 18000 POLICY & PLANNING**

Developing OH & S policy - guidelines - developments - procedure - content of OH & S policy - General principle, strategy and planning, specific goals, compliance - methodology.

Planning - guidelines, methodology steps developing action plan - analysis and identification of priorities, objective & targets, short term action plan, benefits and cost of each option, Development of action plan.

#### IMPLEMENTATION, REVIEW AND IMPROVEMENT PLAN UNIT - III

Guidelines for structure and Responsibilities, Top level management, middle level management, co-ordinator and employees - developing procedures, identifying training needs, providing training, documentation of training, Training methodology consultation and communications.

Checking & Review; performance measurement and monitoring, proactive and reactive monitoring, measurement techniques, inspections, measuring equipment - accidents reports, Process & procedures, recording, investigation corrective action and follow up - records and records management. Handling documentation, information, records. [9]

#### ISO 14000 POLICY, ISO 45001 POLICY & PLANNING UNIT - IV

EMS, ISO 14001, specifications, objectives, Environmental Policy, Guidelines & Principles (ISO 14004), clauses 4.1 to 4.5. Documentation requirements, 3 levels of documentation for an ISO 14000 based EMS, steps in ISO 14001.

Implementation plan, Registration, importance of ISO 14000 to the Management. Auditing ISO14000-General principles of Environmental Audit, Auditor, steps in audit, Audit plan.

ISO 45001 - Scope, Terms and definitions, OH&S Policy, Planning, Objectives, Documentation, Importance, Evaluation, Management Review.

### UNIT - V **ENVIRONMENT IMPACT ASSESSMENT**

ISO 14040 (LCA), General principles of LCA, Stages of LCA, Report and Review. ISO 14020 (Eco labeling) - history, 14021, 14024, Type I labels, Type II labels, ISO 14024, principles, rules for eco labeling before company attempts for it, advantages, EIA in EMS, types of EIA, EIA methodology - EIS, Scope, Benefits. Audit - methodology, auditors audit results, management review - Continual improvement.

#### UNIT - III GASOLINE AND DIESEL HCCI COMBUSTION ENGINES

### Conventional Gasoline Combustion, Effects of EGR, Techniques to HCCI operation in gasoline engines. Conventional Diesel Combustion, Overview of diesel HCCI engines, Techniques-Early Injection, Multiple injections, Narrow angle direct injection (NADI™) concept. [9]

UNIT – IV HCCI CONTROL TEHNIQUES IN SAFETY ASPECTS

Control Methods, Combustion timing sensors, HCCI/SI switching, Transition between operating modes (HCCI-SI-HCCI), Fuel effects in HCCI - gasoline, diesel, auto - ignition requirement, combustion phasing, Influence of equivalence ratio, auto - ignition timing, combustion duration, auto - ignition temperature and auto - ignition pressure, Combustion limits, IMEP and indicated efficiency- Trends in characterizing fuel performance in HCCI engines.

#### UNIT – V **HCCI FUEL REQUIREMENTS & COMBUSTION WITH ALTERNATIVE FUELS** [9]

Introduction, Background, Diesel fuel HCCI, HCCI fuel ignition quality, Gasoline HCCI, HCCI fuel Specification, Fundamental fuel factors. Natural gas HCCI engines, CNG HCCI engines, methane/n-butane/air mixtures. DME HCCI engine-chemical reaction model, Combustion completeness, Combustion control system, Method of combining DME and other fuels, 'unmixed-ness' of DME/air mixture.

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

#### UNIT-II **VEGETABLE OILS**

Availability of vegetable oils -Non-edible oils as biodiesel - Scenario of non-edible oils in India - Blending, Emulsification, Pre heating and - Transesterification.

#### UNIT-III PHYSICAL, CHEMICAL AND THERMAL PROPERTIES

Effect of vegetable oil chemical structure on biodiesel properties - Methodology for various properties estimation - Physical and chemical properties of Biodiesel-Effect of specific heat on biodiesel combustion and performance - Role of latent heat of vaporization in biodiesel combustion process - Effect of thermal conductivity and thermal diffusivity on performance of D.I. diesel engine.

#### UNIT – IV SAFETY ASPECTS IN BIO FUELS

Fire and Explosion Hazards of Bio fuels - Chemical Reactivity Hazards in Bio fuel Manufacturing - Toxicity Hazards in Biofuels Manufacturing-Measures to increase the safety - Comparison of bio fuels and conventional fuels.

#### UNIT-V EMISSION CHARECTERISTICS OF BIODIESEL

Performance of fuel pump, filter, injection, piston head, Piston rings, and lub oil - Performance parameters of Biodiesel as well as blends - Combustion characteristics of Biodiesel (ignition delay, maximum pressure, combustion duration, maximum temperature, heat release rate and mass burning rate) and blends - Emission characteristics of Biodiesel and blends.

Total (L= 45, T = 0) = 45 Periods

| CO4:     | Choose the suitable method of gas liquefaction.                      | U          | Inders | tand   |    |
| CO5:     | Select the required storage method for the cryogenic liquids.        | Understand |        |        |    |
| UNIT – I | ANALYSIS OF REFRIGERATION CYCLES                                     |            |        | [9]    |    |

Development of vapour compression refrigeration cycle from reverse Carnot cycle- conditions for high COP-deviations from ideal vapour compression cycle, multi pressure system, cascade systems-analysis. Vapour absorption systems-aqua ammonia & Li-Br systems, air refrigeration cycles, heat pumps.

#### UNIT – II **REFRIGERATION SYSTEM COMPONENTS**

Compressors- types, performance, characteristics, types of evaporators & condensers and their functional aspects, expansion devices and their behavior with fluctuating load, cycling controls, other components such as accumulators, receivers, oil separators, strainers, driers, check valves, solenoid valves, defrost controllers, etc.

#### PRINCIPLES OF LIQUEFACTION UNIT – III

Joule thomson effect and inversion curve; adiabatic and isenthalpic expansion with their comparison. Properties of cryogenic fluids; properties of solids at cryogenic temperatures; Superconductivity.

#### UNIT – IV GAS LIQUEFACTION SYSTEMS

Recuperative Linde Hampson, Claude, cascade, Heylandt, Kapitza, Collins; regenerative stirling cycle and refrigerator, Slovay refrigerator, Gifford-mcmahon refrigerator, vuilleumier refrigerator, pulse tube refrigerator; liquefaction of natural gas.

#### UNIT – V STORAGE OF CRYOGENIC LIQUIDS

Design considerations of storage vessel; dewar vessels; industrial storage vessels; storage of cryogenic fluids in space; transfer systems and lines for cryogenic liquids; cryogenic valves in transfer lines; two phase flow in transfer system; cooldown of storage and transfer systems

Indian Energy Scenario Basics of Energy and its various forms - Primary / Secondary Energy Sources Energy Conservation Energy Intensive Industries Barriers - EC Act 2003: Salient Features - Schemes of Bureau of Energy Efficiency (BEE) including Designated consumers, State Designated Agencies - Integrated energy policy - National action plan on climate change.

#### UNIT - II **ENERGY MANAGEMENT**

Energy management approach - understanding energy costs, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, fuel and energy substitution, energy metering, precautions, smart metering.

#### UNIT – III **ENERGY ECONOMICS**

Roles and responsibilities of energy manager, accountability. energy consumption, production, cumulative sum of differences (CUSUM) Cost / Energy Share Diagram Break Even Analysis Depreciation Financial Analysis Techniques CUSUM Technique Energy Management Information Systems (EMIS) ESCO Concept [9]

### UNIT – IV THERMAL UTILITIES: OPERATION AND ENERGY CONSERVARTION

i) Boilers (ii) Thermic Fluid Heaters (iii) Furnaces (iv) Waste Heat Recovery Systems (v) Thermal Storage

#### UNIT - V PERFORMANCE STUDY OF THERMAL UTILITIES

Basics of R & A/C COP / EER / SEC Evaluation Psychometric Chart Analysis Types & Applications of Cooling Towers Basics Performance Analysis - Cost of Power Generation Scope for Energy Thermal systems

Review of thermodynamic principles of refrigeration. Bell Coleman air refrigeration - Aircraft cycle - simple, boot strap and regenerative cycle analysis - COP calculation

### UNIT - II REFRIGERANT SELECTION

Properties, Eco - friendly refrigerants, Selection of Refrigerants.

# UNIT - III VAPOUR COMPRESSION AND VAPOUR ABSORPTION REFRIGERATION [9]

T-S and P-H charts - analysis - Performance of systems under varying operating conditions. Multi-stage refrigeration working principles. Ammonia - water systems, three fluid systems. Water - lithium bromide system - Comparison - Steam jet refrigeration, solar refrigeration

### UNIT - IV BALANCING OF COMPONENTS

Condensers - Air cooled, water cooled and evaporative condensers. Evaporator - flooded, dry expansion, shell and tube and double pipe. Compressors - reciprocating, rotary and centrifugal types. Expansion devices - capillary and TEV.

### UNIT - V AIR CONDITIONING SYSTEMS

Psychrometric processes - use of psychrometric chart - Bypass factor - air conditioning cycles - winter, summer and year round air conditioning systems - effective temperature - comfort conditions. Duct design (theoretical treatment) -economic considerations, methods - air distributing systems - humidification - air cleaning - controls - window air conditioners.

| UNIT - I  | INTRODUCTION  |                 | [9]        |    |   |  |

Microbiology of Food Products, Mechanism of food spoilage critical microbial growth requirements, Design for control of micro organisms, The role of HACCP, Sanitation, Regulation and standards.

### UNIT - II PROCESSING & PRESERVATION

Thermodynamic properties and Transfer properties, Water content, Initial freezing temperature, Ice fraction, Transpiration of fresh fruits & vegetables, Food processing techniques for Dairy products, Poultry, Meat, Fruits & Vegetables.

### UNIT - III FREEZING & DRYING

Precooling, Freeze drying principles, Cold storage & freezers, Freezing drying limitations, Irradiation techniques, Cryofreezing, Numerical and analytical methods in estimating Freezing, Thawing times, Energy conservation in food industry.

### UNIT - IV COLD STORAGE DESIGN & INSTRUMENTATION

Initial building consideration, Building design, Specialized storage facility, Construction methods, Refrigeration systems, Insulation techniques, Control & instrumentation, Fire protection, Inspection & maintenance

### UNIT - V PACKAGING AND TRANSPORT

Refrigerated transportation, Refrigerated containers & trucks, Design features, Piping & Role of cryogenics in freezing & transport. Basic packaging materials, types of packaging, Packaging design. Packaging for different types of foods.

Total (L= 45, T = 0) = 45 Periods

### UNIT – I BASCIS OF RESEARCH PROBLEM

Meaning of research problem - Sources of research problem - Criteria Characteristics of a good research problem -Errors in selecting a research problem - Scope and objectives of research problem. Approaches of investigation of solutions for research problem - Data collection - Analysis - Interpretation - Necessary instrumentations.

### UNIT – II **TECHNICAL WRITING AND PROPOSAL**

Effective literature studies approaches - Analysis Plagiarism - Research ethics - Effective technical writing - How to write Report - Paper - Developing Research Proposal - Format of research proposal - Presentation and Assessment by a review committee.

### UNIT - III INTELLECTUAL PROPERTY

Nature of Intellectual Property: Patents - Designs -Trade and Copyright. Process of Patenting and Development: Technological research - Innovation - Patenting - Development. International Scenario: International cooperation on Intellectual Property – Procedure for grants of patents – Patenting under PCT.

#### UNIT – IV PATENT RIGHTS

Patent Rights: Scope of Patent Rights - Licensing and transfer of technology - Patent information and databases -Geographical Indications.

#### UNIT - V **DEVELOPMENTS IN IPR**

New Developments in IPR: Administration of Patent System - New developments in IPR - IPR of Biological Systems -Computer Software - Traditional knowledge Case Studies - IPR and IITs.

Total = 45 Periods

SEMESTER- II / III ADVANCED MATERIALS Т Ρ С L IS20383 0 0 (Elective) 3 3 Course Outcomes : On successful completion of the course, the student will be able to **Cognitive Level** .Understand CO1: Comprehend the construction of composite materials CO2: Develop the production process of polymer matrix composites. Analyze Acquire to build the different manufacturing methods. Understand CO3: Explore the shape memory alloys and applications. CO4: Understand Discover the nano materials and applications. Analyze CO5: UNIT – I INTRODUCTION [ 09 ]

INTRODUCTION TO COMPOSITE MATERIALS: Introduction, classification: polymer matrix composites, metal matrix composites, ceramic matrix composites, carbon-carbon composites, fiber reinforced composites and nature-made composites, and applications.

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

#### UNIT - II POLYMER MATRIX COMPOSITE

Polymer composites, thermoplastics, thermosetting plastics, manufacturing of PMC, MMC & CCC and their applications.

#### UNIT - III MANUFACTURING METHODS

Autoclave, tape production, moulding methods, filament winding, hand layup, pultrusion, RTM.

#### UNIT – IV SHAPE MEMORY ALLOYS

FUNCTIONALLY GRADED MATERIALS: Types of functionally graded materials-classification different systemspreparation-properties and applications of functionally graded materials.

SHAPE MEMORY ALLOYS: Introduction-shape memory effect-classification of shape memory alloys composition-properties and applications of shape memory alloys.

#### UNIT – V NANO MATERIALS

Introduction-properties at nano scales-advantages & disadvantages-applications in comparison with bulk materials (nano structure, wires, tubes, composites). State of art nano advanced- topic delivered by student.

Total (L= 45, T = 0) = 45 Periods

#### SEMESTER- II / III COMPOSITE MATERIALS AND MECHANICS Т Ρ С L IS20385 0 0 (Elective) 3 3 Course Outcomes : On successful completion of the course, the student will be able to Cognitive Level CO1: Infer the basic concepts and characteristics of composites .Understand CO2: Explore the micromechanics of composite materials. Understand Apply the stress and strain, Elastic behavior of composite materials. CO3: Apply Develop the strength of unidirectional lamina. CO4: Understand CO5: Analyze the laminated composite plates. Analyze

K.S.R. COLLEGE OF ENGINEERING (Autonomous)

### UNIT – I BASIC CONCEPTS AND CHARACTERISTICS

Geometric and Physical definitions, natural and man-made composites, Aerospace and structural applications, types and classification of composites.

**Reinforcements:** Fibres – Glass, Silica, Kevlar, carbon, boron, silicon carbide, and born carbide fibres. Particulate composites, Polymer composites, Thermoplastics, Thermosetts, Metal matrix and ceramic composites.

### UNIT – II MICROMECHANICS

Unidirectional composites, constituent materials and properties, elastic properties of a lamina, properties of typical composite materials, laminate characteristics and configurations. Characterization of composite properties.

Manufacturing methods:Autoclave, tape production, moulding methods, filament winding, man layup, pultrusion,RTM.UNIT - IIICOORDINATE TRANSFORMATION[09]

Hooke's law for different types of materials, Hooke's law for two dimensional unidirectional lamina, Transformation of stress and strain, Numerical examples of stress strain transformation, Graphic interpretation of stress – strain relations. Off – axis, stiffness modulus, off – axis compliance.

Elastic behavior of unidirectional composites: Elastic constants of lamina, relationship between engineering constants and reduced stiffness and compliances, analysis of laminated composites, constitutive relations.

### UNIT – IV STRENGTH OF UNIDIRECTIONAL LAMINA

Micro mechanics of failure, Failure mechanisms, strength of an orthotropic lamina, strength of a lamina under tension and shear maximum stress and strain criteria, application to design. The failure envelope, first ply failure, free-edge effects. Micros mechanical predictions of elastic constants.

### UNIT – V ANALYSIS OF LAMINATED COMPOSITE PLATES

Introduction thin plate theory, specially orthotropic plate, cross and angle ply laminated plates, problems using thin plate theory. **Total (L= 45, T = 0) = 45 Periods**

# K.S.R. COLLEGE OF ENGINEERING (Autonomous)

## <u>Semester- II / III</u>

### MATERIALS TESTING AND CHARACTERIZATION TECHNIQUES (Elective)

## Course Outcomes : On successful completion of the course, the student will be able to

- CO1: Knowledgeable in microstructure evaluation & crystal structure analysis.
- CO2: Gain knowledge in electron microscopy.

IS20391

- CO3: Discover the Chemical and Thermal Analysis,.
- CO4: Examine the static mechanical testing methods.
- CO5: Inspect the dynamic mechanical testing methods.

## UNIT – I MICRO AND CRYSTAL STRUCTURE ANALYSIS

Principles of Optical Microscopy – Specimen Preparation Techniques – Polishing and Etching – Polarization Techniques – Quantitative Metallography – Estimation of grain size – ASTM grain size numbers – Microstructure of Engineering Materials - Elements of Crystallography – X- ray Diffraction – Bragg's law – Techniques of X-ray Crystallography – Debye – Scherer camera – Geiger Diffractometer – analysis of Diffraction patterns – Inter planer spacing – Identification of Crystal Structure, Elements of Electron Diffraction.

## UNIT – II ELECTRON MICROSCOPY

Interaction of Electron Beam with Materials – Transmission Electron Microscopy – Specimen Preparation – Imaging Techniques – BF & DF – SAD – Electron Probe Microanalysis – Scanning Electron Microscopy – Construction & working of SEM – various Imaging Techniques – Applications-Atomic Force Microscopy- Construction & working of AFM - Applications

### UNIT – III CHEMICAL AND THERMAL ANALYSIS

Basic Principles, Practice and Applications of X-Ray Spectrometry, Wave Dispersive X-Ray Spectrometry, Auger Spectroscopy, Secondary Ion Mass Spectroscopy, Fourier Transform Infra Red Spectroscopy (FTIR)- Proton Induced X-Ray Emission Spectroscopy, Differential Thermal Analysis, Differential Scanning Calorimetry (DSC) And Thermo Gravitymetric Analysis (TGA).

### UNIT – IV MECHANICAL TESTING – STATIC TESTS

Hardness – Brinell, Vickers, Rockwell and Micro Hardness Test – Tensile Test – Stress – Strain plot – Proof Stress – Torsion Test - Ductility Measurement – Impact Test – Charpy & Izod – DWTT - Fracture Toughness Test, Codes and standards for testing metallic and composite materials.

## UNIT – V MECHANICAL TESTING – DYNAMIC TESTS

Fatigue – Low & High Cycle Fatigues – Rotating Beam & Plate Bending HCF tests – S-N curve – LCF tests – Crack Growth studies – Creep Tests – LM parameters – AE Tests-modal analysis - Applications of Dynamic Tests.

### Total (L= 45, T = 0 ) = 45 Periods

#### K.S.R. COLLEGE OF ENGINEERING (Autonomous) SEMESTER- II / III NON DESTRUCTIVE TESTING AND EVALUATION L P Т IS20392 (Elective) 3 0 0 Course Outcomes : On successful completion of the course, the student will be able to Cognitive Level Explore the working principle, types and characteristics of various NDT processes. .Understand CO1: Recognize different surface NDT methods and its applications CO2: Understand CO3: Analyze the application of Thermography and Eddy current testing. Analze CO4: Comprehend the Ultrasonic Testing and Acoustic Emission process. Understand

CO5: Apply the working principle and applications of Radiography techniques.

#### UNIT - I **OVERVIEW OF NDT**

NDT Versus Mechanical testing, Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterisation. Relative merits and limitations, Various physical characteristics of materials and their applications in NDT., Visual inspection - Unaided and aided

#### UNIT – II SURFACE NDE METHODS

Liquid Penetrant Testing - Principles, types and properties of liquid penetrants, developers, advantages and limitations of various methods, Testing Procedure, Interpretation of results. Magnetic Particle Testing- Theory of magnetism, inspection materials Magnetisation methods, Interpretation and evaluation of test indications, Principles and methods of demagnetization. Residual magnetism.

#### THERMOGRAPHY AND EDDY CURRENT TESTING (ET) UNIT - III

Thermography- Principles, Contact and non contact inspection methods, Techniques for applying liquid crystals, Advantages and limitation - infrared radiation and infrared detectors, Instrumentations and methods, applications.Eddy Current Testing-Generation of eddy currents, Properties of eddy currents, Eddy current sensing elements, Probes, Instrumentation, Types of arrangement, Applications, advantages, Limitations, Interpretation/Evaluation

UNIT – IV ULTRASONIC TESTING (UT) AND ACOUSTIC EMISSION (AE) [ 09 ] Ultrasonic Testing-Principle, Transducers, transmission and pulse-echo method, straight beam and angle beam, instrumentation, data representation, A/Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight Diffraction. Acoustic Emission Technique – Principle, AE parameters, Applications

#### UNIT – V **RADIOGRAPHY (RT)**

Principle, interaction of X-Ray with matter, imaging, film and film less techniques, types and use of filters and screens, geometric factors, Inverse square, law, characteristics of films - graininess, density, speed, contrast, characteristic curves, Penetrameters, Exposure charts, Radiographic equivalence. Fluoroscopy- Xero-Radiography, Computed Radiography, Computed Tomography

| UNIT – I  | SAFETY IN PROCESS DESIGN AND PRESSURE SYSTEM  |       |                 | [      | 09 ] |  |

### UNIT – I SAFETY IN PROCESS DESIGN AND PRESSURE SYSTEM

Design process, conceptual design and detail design, assessment, inherently safer design - chemical reactor, types, batch reactors, reaction hazard evaluation, assessment, reactor safety, operating conditions, unit operations and equipments, utilities. Pressure system, pressure vessel design, standards and codes - pipe works and valves, heat exchangers - process machinery - over pressure protection, pressure relief devices and design, fire relief, vacuum and thermal relief, special situations and disposal - flare and vent systems - failures in pressure system.

#### UNIT – II PLANT COMMISSIONING AND INSPECTION

Commissioning phases and organization, pre-commissioning documents, process commissioning, commissioning problems, post commissioning documentation Plant inspection, pressure vessel, pressure piping system, non destructive testing, pressure testing, leak testing and monitoring - plant monitoring, performance monitoring, condition, vibration, corrosion, acoustic emission - pipe line inspection.

#### UNIT – III PLANT OPERATIONS

Operating discipline, operating procedure and inspection, format, emergency procedures - hand over and permit system start up and shut down operation, refinery units - operation of fired heaters, driers, storage - operating activities and hazards - trip systems - exposure of personnel.

### UNIT – IV PLANT MAINTENANCE. MODIFICATION AND EMERGENCY PLANNING

Management of maintenance, hazards - preparation for maintenance, isolation, purging, cleaning, confined spaces, permit system - maintenance equipment - hot works - tank cleaning, repair and demolition - online repairs - maintenance of protective devices, modification of plant, problems - controls of modifications. Emergency planning, disaster planning, onsite emergency - offsite emergency, APELL.

#### UNIT – V **STORAGES**

General consideration, petroleum product storages, storage tanks and vessel - storages layout - segregation, separating distance, secondary containment - venting and relief, atmospheric vent, pressure, vacuum valves, flame arrestors, fire relief - fire prevention and protection - LPG storages, pressure storages, layout, instrumentation, vaporizer, refrigerated storages -LNG storages, hydrogen storages, toxic storages, chlorine storages, ammonia storages, other chemical storages underground storages - loading and unloading facilities - drum and cylinder storage - ware house, storage hazard assessment of LPG and LNG.

| UNIT - I  | SAFETY IN METAL WORKING MACHINERY AND WOOD WORKING MACHINE  | S          |                 | ſ      | 10 ] |

#### UNIT - I SAFETY IN METAL WORKING MACHINERY AND WOOD WORKING MACHINES

General safety rules, principles, maintenance, Inspections of turning machines, boring machines, milling machine, planning machine and grinding machines, CNC machines, Wood working machinery, types, safety principles, electrical guards, work area, material handling, inspection, standards and codes - saws, types, Hazards.

#### UNIT - II SAFETY IN DESIGN, USE & MAINTENANCE OF MACHINES [10]

Basic Principle of Machine guarding during maintenance, Zero Mechanical State (ZMS), Definition, Policy for ZMS quarding of hazards - point of operation protective devices, machine guarding, types, fixed guard, interlock guard, automatic quard, trip quard, electron eye, positional control quard, fixed quard fencing - quard construction - quard opening. Selection and suitability: lathe - drilling-boring - milling - grinding - shaping sawing - shearing - presses - forge hammer - flywheels shafts - couplings - gears - sprockets wheels and chains - Pulleys and belts-authorized entry to hazardous installations benefits of good guarding systems - introduction to sensors, instrumentation - types and measurement.

#### SAFETY IN WELDING AND GAS CUTTING UNIT - III

Gas welding and oxygen cutting, resistances welding, arc welding and cutting, common hazards, personal protective equipment, training, safety precautions in brazing, soldering and metalizing - explosive welding, selection, care and maintenance of the associated equipment and instruments - safety in generation, distribution and handling of industrial gases - colour coding - flashback arrestor - leak detection - pipe line safety - storage and handling of gas cylinders.

### SAFETY IN COLD FARMING AND HOT WORKING OF METALS UNIT - IV

Cold working, power presses, point of operation safe guarding, auxiliary mechanisms, feeding and cutting mechanism, hand or foot - operated presses, power press electric controls, power press set up and die removal, inspection and maintenance metal shears-press brakes. Hot working safety in forging, hot rolling mill operation, safe guards in hot rolling mills - hot bending of pipes, hazards and control measures. Safety in gas furnace operation, cupola, crucibles, ovens, foundry health hazards, work environment, material handling in foundries, foundry production cleaning and finishing foundry processes.

### UNIT - V SAFETY IN FINISHING, INSPECTION AND TESTING

Heat treatment operations, electro plating, paint shops, sand and shot blasting, safety in inspection and testing, dynamic balancing, hydro testing, valves, boiler drums and headers, pressure vessels, air leak test, steam testing, safety in radiography, personal monitoring devices, radiation hazards, engineering and administrative controls, Indian Boilers Regulation. Health and welfare measures in engineering industry - pollution control in engineering industry - industrial waste disposal.

1. Every student shall have a supervisor who is the member of the faculty of the institution. Identification of student and his faculty supervisor has to be completed within the first two weeks from the day of beginning of third semester.

- 2. The students should make industrial visits, identify real time problems and submit reports.
- 3. In consultation with supervisor, the problem has to be selected.
- 4. Preferably it can be a collaborative project with industry.
- 5. A detailed study of the problem and its financial implications and physical and mental hazards can be studied.
- 6. The methodology to tackle this problem can be studied and analyzed.
- 7. A mini project report should be submitted at the end of the semester as per guidelines.
- 8. This project report should be evaluated jointly by external and internal examiners.

1. The supervisor allotted for project phase I will continue to supervise project phase II.

2. As per methodology suggested in phase I, the project can be implemented.

3. Outcome of implementation can be studied and each student shall finally produce a comprehensive report covering back ground information, literature survey, problem statement, results and discussions with conclusion.

4. This final report shall be in type written form as specified in the guidelines.

5. The project report should be evaluated jointly by external and internal examiners.
